

PRESS RELEASE FROM BSE-SOFIA

Trading System Upgrade to Xetra Release 11

BSE-Sofia would like to inform its members that on 28.06.2010 the trading system will be upgraded to Xetra Release 11. The new version of the Xetra trading system together with an installation guideline will be available for download on the web site of the Exchange.

Xetra Release 11 functionalities are not different from the system used at present. Even so, its installation is absolutely necessary, because otherwise the Exchange member will not have an access to the trading system! We remind the members using applications based on Values API interface that they have to update them with the new version, in order to be able to work in a simulation and real environment.

Xetra Release 11 will not lead to any changes in the existing organisation of the BSE-Sofia markets or rules, on the basis of which the trade is carried out. For more information, please contact Information Technologies Directorate at +359 2/ 4001 449 and Trading Directorate at +359 2/ 937 09 42; 44 or 49.
