T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

2 Introduction

The T7 FIX Gateway is intended for participants that require a standard FIX connection to the exchange and supports all T7 market types:

T7 Cash: The market type T7 Cash includes all Xetra T7 exchanges.

T7 Derivatives: The market type T7 Derivatives includes all Eurex T7 exchanges.

The target of this document is to provide a way to access the T7 trading system via an interface using the FIX protocol. The interface includes basic trading functionality for T7 Cash and T7 Derivatives markets in a consolidated manner.

The T7 FIX Gateway provides the following trading functions:

- · Order management
- Execution notifications
- Risk control event notifications
- · Request for quote
- Cross Trade Announcement
- Client Liquidity Improvement Process (CLIP) (only for T7 Derivatives)
- Creation of a strategy (only for T7 Derivatives)
- Inquiry of risk limits information (only for T7 Derivatives)
- Off-book trade entry (only for T7 Cash)

The T7 trading system supports the access via FIX Gateway for both market types, T7 Derivatives and T7 Cash.

It is possible to use one FIX session for the access to several exchanges within the market type T7 Cash, but for the access to T7 Boerse Frankfurt (Boerse Frankfurt and Boerse Frankfurt Zertifikate) dedicated FIX sessions are required.

The possibility of the access to the different market types via a unique FIX session will not be offered.

Participants are requested to order separate FIX sessions for their business units for the different T7 platforms: T7 Cash for all XMICs except T7 Boerse Frankfurt, T7 Boerse Frankfurt, T7 Derivatives. This can be done via the Xetra Member Section (T7 Cash) and the Eurex Member Section (T7 Derivatives) respectively.

Note: The T7 FIX Gateway does not provide any reference data. Participants are asked to retrieve reference data via the RDI (Reference Data Interface), via file provided on the Common Report Engine or from the web page of the respective market (T7 Cash, T7 Derivatives).

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

2.1 Purpose

The purpose of this document is to provide an overview of the T7 FIX Gateway for the T7 trading system.

The focus of the description is to capture T7 specific behaviour, highlight where it deviates from the recommended FIX Protocol standard and keep the amount of the FIX specification which needs to be included in this document to a minimum.

This document contains the description for all supported market types (Cash and Derivatives). Differences between the different market types are documented at the relevant places within this document.

2.2 Supported FIX Versions

Only FIX protocol version 4.4 is supported.

The interface is a point-to-point service based on the technology and industry standards TCP/IP, FIX and FIX Session Protocol. The session and application event models and messages are based on the definitions of the FIX protocol for the supported versions.

Following a FIX Protocol Limited (FPL) recommendation to use standard fields from higher versions as the primary solution before using user-defined fields, Deutsche Boerse applies the following design rules for support of functionality currently not provided in the corresponding FIX version:

- Fields reserved for internal use (Tag numbers 10000 19999) are not used.
- Standard fields of the supported FIX versions that only became part of the standard message in a higher version are used.
- FIX fields of higher versions are only added to standard messages, if no standard field for the required functionality is available in the supported FIX versions.

Characters in ASCII range 32-126 are allowed.

2.3 Functionality not supported anymore

As part of the stepwise migration of the existing T7 FIX interface to the T7 FIX LF interface, part of the functionality offered via the T7 FIX Gateway has been deactivated starting with T7 Release 10.0:

- Backoffice functionality: Backoffice sessions are not offered anymore
- FIX 4.2 version: FIX 4.2 sessions are not offered anymore
- SMP functionality: requests containing a Self Match Prevention ID will be rejected
- Pre-trade risk limits functionality: request UserPartyRiskLimitsRequest (UCL) will be rejected

Please note that most of the references to the related functionalities have not been removed from this document.

2.4 Intended Readership

The main target group is technical staff within the T7 trading system participants. Throughout this document the term "participant" stands for a T7 participant (see **chapter 3.2 Party Identification** for details).

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

2.5 Change Log

Date	Version	Description
09.06.2021	9.1	Interface Version T7-9.1-1 (last version for T7 9.1)
06.08.2021	10.0	Interface Version T7-10.0-1 (first version for T7 10.0) Following functionality is not supported anymore (2.3): • Backoffice functionality: Backoffice sessions are not offered anymore • FIX 4.2 version: FIX 4.2 sessions are not offered anymore • SMP functionality: requests containing a Self Match Prevention ID will be rejected • Pre-trade risk limits functionality: request UserPartyRiskLimitsRequest (UCL) will be rejected
		New valid value for T7 Derivatives (6.5.6.1): • ExecRestatementeReason (378) = 302 (Market Order Uncrossing) For ISINs traded in more than one currency, the default EUR (Euro) will be used if the currency field if missing in the FIX requests (3.4).

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3 Service Description

3.1 FIX Session Concept

As per the FIX Protocol standard, a FIX session is defined as a bi-directional stream of ordered messages between two parties within a contiguous sequence number.

A participant may have multiple FIX sessions. A FIX session will be initiated by the participant, and maintained between the participant and the T7 FIX Gateway over the course of a trading day.

Participants are required to order separate FIX sessions for the access to the different T7 platforms: T7 Cash for all XMICs except T7 Boerse Frankfurt, T7 Boerse Frankfurt, T7 Derivatives.

The T7 FIX Gateway supports two types of sessions:

Trading session: supports order management, request for quote, cross trade announcement, Client Liquidity Improvement Process (CLIP) (Derivatives only), risk control events, strategy creation (Derivatives only) and off-book trade entry (Cash only). Each session will receive information for all of its own orders. Several traders may share a single session, but every session can only be instantiated once.

Back-office session: used for receipt of trade confirmations at business unit level. Clearing business units receive trade confirmations from their trading business units and from their non-clearing members. Back-office sessions can be configured to receive additionally drop copy information for standard (not lean) orders as well as risk control events at the business unit level. The clearing members don't receive drop copy order information from their non-clearing members.

3.2 Party Identification

The **participant** is an entity accessing the T7 Trading System.

A participant may have several **business units** as independent entities taking part in trading at the exchange. Business units are identified by a business unit ID. A business unit belongs to a participant.

A **user** is a person, such as a trader or an exchange market supervisor that interacts with the T7 Trading System. Users are identified by a user ID. A user belongs to one business unit. A user is a trader or administrator that logs on to the system to enter commands on the trading system.

Users can be assigned to a specific **trader group**, along with the head trader and supervisor roles:

- A user with a user level of **head trader** may modify or cancel orders of any user belonging to the same trader group.
- A user with a user level of supervisor may modify or cancel orders of any user belonging to the same business unit.

For the version FIX 4.4 the <Parties> component block will be used to identify the parties in the FIX messages. For each party a separate occurrence of the repeating group will be set up. For FIX 4.2 a separate field will be defined for each party. For more information see **chapter 6.13.7** <**Parties>**.

T7 FIX Gateway	6 August 2021
Tr Tr Gatoway	7 / laguat 202 !
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.3 Market Identifier Codes

The FIX Gateway is designed to support the access to all markets on T7 (Cash and Derivatives). The supported markets are identified by unique Market Identifier Codes (MIC):

Market Identification (MIC)	Deriv- atives	Cash	Description
XEEE	\checkmark		European Energy Exchange
XEUR	\checkmark		Eurex Deutschland
XBUD		✓	Budapest Stock Exchange
XBUL		✓	Bulgarian Stock Exchange
XETR		✓	Xetra Frankfurt
XFRA		✓	T7 Boerse Frankfurt (Boerse Frankfurt and Boerse Frankfurt Zertifikate)
XLJU		✓	Ljubljana Stock Exchange
XMAL		\checkmark	Malta Stock Exchange
XPRA		✓	Prague Stock Exchange
XVIE		✓	Vienna Stock Exchange
XZAG		✓	Zagreb Stock Exchange

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.4 Security Identification

Instruments traded on T7 will be identified by the product identifier (*Symbol* (55)) and the instrument identifier (*SecurityID* (48)). Both fields must be provided on the FIX requests operating on instrument level. For messages operating on product level e.g. *UserOrderMassActionRequest* (*UCA*) only *Symbol* (55) will be provided.

For the identification of an instrument traded on **T7 Derivatives** only the marketplace-assigned identifier with *SecurityIDSource (22) = "M" (Marketplace-assigned identifier)* will be supported and must be provided in the FIX request. Both single and multileg instruments are uniquely identified by the corresponding instrument ID. T7 Derivatives messages sent to the customers will also contain the marketplace-assigned identifier in the component <Instrument>.

For the identification of an instrument traded on **T7 Cash** the ISIN with *SecurityIDSource* (22) = "4" (ISIN) and the marketplace-assigned identifier with *SecurityIDSource* (22) = "M" (Marketplace-assigned identifier) will be supported. One of both identifiers must be provided in the FIX requests. If *SecurityIDSource* (22) is set to "4" (ISIN), *Symbol* (55) can contain "[N/A]" instead of the product identifier.

If an ISIN traded in more than one currency is used as instrument identifier, a currency is required to identify the instrument uniquely. This can be entered in the FIX requests in the corresponding currency field (*Currency (15) / UCurrency (30015)*). For such ISINs, if the currency field is missing in the FIX requests, the value EUR (Euro) will be assumed.

T7 Cash messages sent to the customers will contain both instrument identifiers in the component < Instrument >:

- ISIN: SecurityID (48) with SecurityIDSource (22) = "4" (ISIN)
- Instrument ID assigned by the trading system: SecurityAltID (455) with SecurityAltIDSource (456) = "M" (Marketplace-assigned identifier)

<instrument></instrument>	Deriv- atives	Cash	Description in Derivatives - all Messages	Description in Cash - Messages from Client	Description in Cash - Messages to Client
Symbol (55)	√	√	Product identifier	"[N/A]" (if ISIN is used) or Product identifier	Product identifier
SecurityID (48)	✓	✓	Instrument identi- fier (marketplace- assigned identifier)	Instrument iden- tifier (ISIN or marketplace- assigned identifier)	Instrument identi- fier (ISIN)
SecurityIDSource (22)	√	✓	"M" (Marketplace- assigned identifier)	"4" (ISIN) "M" (Marketplace-assigned identifier)	"4" (ISIN)
ProductComplex (1227)	\checkmark		Instrument type	-	-
SecurityType (167)	\checkmark		Security type	-	-
SecuritySubType (762)	\checkmark		Strategy type	-	-
NoSecurityAltID (454)		✓	-	-	"1"
SecurityAltID (455)		✓	-	-	Instrument iden- tifier assigned by the trading system
SecurityAltID-Source (456)		✓	-	-	"M" (Marketplace- assigned identifier)

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.5 Order ID Policy

The standard FIX policy regarding usage of Client Order IDs is supported by the T7 FIX Gateway.

Order related messages must include a unique customer defined identifier, the Client Order ID, in the ClOrdID (11) field.

CIOrdIDs with 20 characters or less are accepted. Characters in ASCII range 32-126 are allowed.

A *ClOrdID* (11) may only be used once per business day and trading session. Additionally the T7 FIX Gateway enforces the uniqueness of *ClOrdID* (11) values among currently live orders. It is not recommended to reuse ClOrdIDs from inactive orders.

The Client Order ID needs to change on every modification and cancellation request; the original scope is specified by the *OrigClOrdID (41)*. In this way the customer is able to find and track individual requests by their Client Order ID. This FIX concept is called message chaining and intended for order handling through a single interface and session.

Orders entered through the FIX Gateway can be modified through sessions of other interfaces, i.e. T7 GUI or Enhanced Trading Interface (ETI). ETI supports message chaining but does not enforce it. It is recommended to avoid using message chaining in both the FIX Gateway and ETI in order to receive order updates conducted through ETI also on the FIX Gateway. This can be done by setting *CIOrdID* (11) = *OrigCIOrdID* (41) in ETI which is not permitted in the FIX Gateway. The T7 GUI does not change the Client Order ID of an order by using the same approach.

Note: The FIX Gateway will ignore trailing spaces in the field ClOrdID when a client order ID is checked for uniqueness among currently live orders. A newly entered *ClOrdID* (11) is considered duplicate by the FIX Gateway, if it only differs in the number of trailing spaces from the *ClOrdID* (11) of a live order. In this case the FIX Gateway will send a *Business Message Reject* (j) message denoted by *Business-RejectReason* (380) = 0 (Other) and Text (58) = "ClOrdID is not unique."

Example: If a live order exists with the *ClOrdID* (11) = "Test", any request with *ClOrdID* (11) = "Test" will be rejected. Note that this has no impact on the *OrigClOrdID* (41), which still must provide the correct number of trailing spaces to identify the corresponding order.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.6 Uniqueness of Identifiers

The following table documents the criteria required for uniqueness of IDs:

FIX Field	Description	Rule	Uniqueness
ClOrdID (11)	Unique customer defined order request identifier.	The uniqueness of ClOrdID (11) is checked at entry time among currently live orders for the same session. Duplicate ClOrdID (11) values for the same session will be rejected.	- Session
ExecID (17)	The field ExecID (17) in the Execution Report provides a unique identifier and can be used for the identification of duplicate order messages.	Is unique per session.	- Session
OrderID (37)	Exchange Order ID generated by the T7 System; it remains constant over the lifetime of an order.	An exchange order ID is guaranteed to be unique among all orders of the same product.	- Product
TrdMatchID (880)	Unique identifier for each price level (match step) of a match event; it is used for public trade reporting (onbook trades only).	Is unique per product and business day.	- Business Day - Product
SecondaryExecID (527) LegExecID (1893) SideTradeID (1506)	Private identifier of an order match step event, which can be used for reconciliation between Order Executions and Trade Notifications.	Is unique per product and business day.	- Business Day - Product
SideTradeReportID (1005)	Unique identifier for each side of a trade (with or without a central counterparty). Only used for T7 Cash trades.	Is unique per trade type (on- book/off-book), product and business day.	- Trade Type - Business Day - Product
TradeReportID (571)	In messages sent via FIX Back-office sessions, the field TradeReportID (571) in the Trade Capture Report pro- vides a unique trade identifier and can be used for the iden- tification of duplicate trade confirmation messages.	Is unique per business day and business unit.	- Business Day - Business Unit
TradeID (1003) OrigTradeID (1126)	The TradeID (1003) field in the Trade Notification uniquely identifies all allocations referring to the same matching event, instrument and price. The OrigTradeID (1126) is delivered for trade reversals and contains the TradeID (1003) of the original trade.	Is unique per product and business day.	- Business Day - Product

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

continued				
FIX Field	Description	Rule	Uniqueness	
UTransactTime (30060) MassActionReportID (1369) SecurityStatusReportID (28781)	Transaction timestamp which provides date and time in UTC, represented as nanoseconds past the UNIX epoch (00:00:00 UTC on 1 January 1970).	Is unique per product.	- Product	

3.7 Quantity Fields

Technically, the quantity fields are defined with a format that allows up to 15 digits before decimal point and at most 4 significant decimal places (Qty (15.4)).

Functionally, the usage and the allowed formats for the quantity fields are different depending on the market type and on the instrument setup:

For T7 Derivatives the user is not allowed to enter quantity fields with decimals (other than "0"). Entering a value with decimals or a value higher than the allowed maximum value leads to a rejection.

For T7 Cash the user is able to enter quantity fields with decimals (other than "0") only if the related instrument has a minimum tradeable unit less than 1. For other instruments, entering a quantity with decimals (other than "0") will lead to a rejection.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.8 Pending Responses "Request Status Unknown"

For some FIX requests, a pending FIX response "request status unknown" will be generated by the T7 FIX Gateway when the status of the corresponding request is unknown. For example:

- if no response from the back end is received within a certain time (if the back end response is received by the T7 FIX Gateway afterwards an additional response message will be sent).
- if a T7 response does not contain a clearly defined processing result (e.g. ETI field SessionRejectReason (373) = "105" (Error converting response or broadcast)).
- in some recovery situations (e.g. several modify order requests with *PossDupFlag (43) = "Y"* for the same order).

If a pending message indicating that the status of a FIX request is unknown is received, clients are requested to check the status of the request in an alternative way (e.g. via GUI).

Following table contains the information about the requests, for which pending responses "request status unknown" are generated, and the FIX fields used as identification criteria of the corresponding response messages:

Request	Response Message	Response Indentification Criteria
Order Requests	ExecutionReport (8)	See details in "3.9.10"
User/TradeCaptureReport (UAE/AE)	User/TradeCaptureReportAck (UAR/AR)	TrdRptStatus (939) = 8 (Pending verification)
QuoteRequest (R)	Mass/QuoteAcknowledgement (b)	QuoteStatus (297) = 10 (Pending)
CrossRequest (UDS)	CrossRequestAck (UDT)	CrossReqAckStatus (25101) = 2 (Received, not yet processed)
SecurityStatusDefinitionRequest (U27)	SecurityStatus (f)	RequestResult (1511) = 4 (Data temporarily unavaiable)
UserPartyRiskLimitsRequest (UCL)	UserPartyRiskLimitsReport (UCM)	RequestResult (1511) = 4 (Data temporarily unavaiable)

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9 Order Management

A FIX session can only modify or cancel own orders (i.e. orders previously submitted successfully on the same FIX session).

3.9.1 Order Types / Trading, Execution and Validity Restrictions

The following order types are supported via the T7 FIX interface:

Order Type	Deriv- atives	Cash	Description	Relevant FIX Tags
Market (M)	✓	✓	Market orders have no specific price limit. They will be matched to the best price available.	- OrdType (40) = '1'
Limit (L)	√	√	Limit orders include a specified price limit and may not be executed at a price worse than that limit.	- OrdType (40) = '2' - Price (44)
Stop Market (S)	√	✓	Stop orders are orders that create market orders when the specified trigger price is reached. Stop orders are not visible in the order book for any market participant.	- OrdType (40) = '3' - StopPx (99)
Stop Limit (SL)	√	✓	Stop limit orders create limit orders when the specified trigger price is reached. Stop limit orders are not visible in the order book for any market participant.	- OrdType (40) = '4' - Price (44) - StopPx (99)
Iceberg (Ice)		√	Limit Order that contains a peak quantity and an overall quantity. The peak quantity can be determined absolutely or randomly. Once the displayed quantity has been completely executed, a new peak is entered into the book. In auction trading, iceberg orders contribute with their overall volume.	<displayinstruction> - OrdType (40) = '2' - Price (44)</displayinstruction>
Volume Discovery Order (VDO)		✓	Volume Discovery Order is an enhancement of the Iceberg Order which offers the possibility to execute the hidden part of the order alternatively against other orders of this kind at the current midpoint of the order book. To use the Volume Discovery functionality two limit fields have to be set. The first limit (field Price (44)) specifies the price of the visible part of a Volume Discovery Order. The second limit (field VolumeDiscoveryPrice (25125)) specifies the upper/lower boundary price at which the possible midpoint match for the hidden volume of the buy/sell Volume Discovery Order is possible.	<displayinstruction> - OrdType (40) = '2' - Price (44) - VolumeDiscoveryPrice (25125)</displayinstruction>

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

continued						
Order Type	Deriv- atives	Cash	Description	Relevant FIX Tags		
Immediate or Cancel (IOC)	✓	✓	An IOC order is to be filled immediately, either completely or to the extent possible; the portion that cannot be filled immediately is canceled. The execution restriction IOC is allowed for Market and Limit orders.	- TimeInForce (59) = '3'		
Fill or Kill (FOK)		✓	A Market or Limit order, which is executed immediately and fully or not at all. If immediate and full execution is not possible, the order is canceled without entry in the order book.	- TimeInForce (59) = '4'		
Good till Crossing (GTX)		✓	Allows to opt for a deletion of the Volume Discovery Order at the start of any auction or volatity iterruption. In this case a delete ExecutionReport (8) with ExecRestatementReason (378) = "148" (Order Expiration Intraday) will be sent.	- TimeInForce (59) = '5'		
Book or Cancel (BOC)	✓	✓	A Limit order, which is placed as resting liquidity in the order book to ensure passive execution. If immediate (and hence aggressive) execution is possible, the order is rejected without entry into the order book.	- ExecInst (18) contains '6'		
Trailing Stop (TSO)		✓	A Trailing Stop order is a Stop order whose stop limit is adjusted in accordance with the development of the reference price. Because of the dynamic adjustment of the stop limit the investor does not need to permanently watch the market in order to optimize his stop limit.	- ExecInst (18) contains 'a' - OrdType (40) = 'P' - StopPx (99) - PegOffsetValue (211) - PegOffsetType (836)		
One-cancels-the- other (OCO)	✓	✓	A combination of a Limit order and a Stop (Market) order, expressed as a single order. Traders will specify a limit price and a trigger price as part of one order.	- OrdType (40) = '2' - Price (44) - TriggerType (1100) = '4' - TriggerPrice (1102)		
Opening auction only (OAO)		✓	Order only valid in opening auctions.	- TradingSessionSubID (625) = '2'		
Closing auction only (CAO)	✓	✓	Closing auction only orders may be entered during the entire trading day, but are only active during the closing auction phase.	- TradingSessionSubID (625) = '4'		
Intraday auction only (IAO)		✓	Order only valid in intraday auctions.	- TradingSessionSubID (625) = '6'		
Auction only (AOO)		✓	Order only valid in auctions.	- TradingSessionSubID (625) = '8'		
Special auction (SA)		✓	Order only valid in special auction.	- TradingSessionSubID (625) = '105'		

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

continued						
Order Type	Deriv- atives	Cash	Description	Relevant FIX Tags		
Good-for-day (Day)	✓	✓	All orders are assumed to be day orders unless otherwise specified. The validity of a day order ends at the close of that day's trading period.	- TimeInForce (59) = '0'		
Good-till-date (GTD)	√	√	Order carries a specified date up to one year from entry on which the order is automatically canceled.	- TimeInForce (59) = '6' - ExpireDate (432)		
Good-till- canceled (GTC)	√	√	Order remains valid until it is executed, canceled, or if the contract expires.	- TimeInForce (59) = '1'		
Persistent	√	✓	A Persistent order is an order that survives a trading interruption or system failure. Persistent orders are always written to disk to prevent them from being lost during an emergency and remain in the book until their validity expires.	- absence of ExecInst (18) or - ExecInst (18) contains 'H'		
Non-persistent	√	√	Non-persistent orders are automatically canceled in case of a trading interruption or exchange system failure.	- ExecInst (18) contains 'Q'		

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.1.1 Relevant FIX Fields for the identification of the Order Types

The following table shows the relevant FIX fields for identifying an order type, the usage of the relevant tags and components and the assignments of the tag values depending on the order type attribute. Following information has to be considered:

- "Y" or "N" will indicate if tags and components are mandatory or optional for the type of order specified.
- Other values will describe the tag values allowed/supplied for the type of order specified. Example: =1/=2 means that one of the valid values "1", "2" must be supplied.
- Empty cells will indicate that a tag or component is not allowed for the type of order specified.

Tag	Field Name	M	L	S	SL	Ice	VDO	TSO	FOK	вос	осо	IOC
	<display- Instruction></display- 					Y	Y					
	<peg- Instructions></peg- 							Y				
18	ExecInst	N	N	N	N	N	N	con- tains 'a'	N	con- tains '6'	N	N
40	OrdType	=1	=2	=3	=4	=2	=2	=P	=1/=2	=2	=2	=1/=2
44	Price		Υ		Υ	Υ	Υ		-/Y	Υ	Υ	-/Y
59	TimeInForce	N	N	N	N	N	N	N	=4	N	N	=3
99	StopPx			Υ	Υ			Y/N				
1100	TriggerType										=4	
1102	TriggerPrice										Υ	
25125	VolumeDis- coveryPrice						Y					
	Derivatives	\checkmark	\checkmark	✓	✓					✓	✓	✓
	Cash	\checkmark	√	✓	✓	✓	✓	\checkmark	✓	✓	✓	✓

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.2 Price Validity Checks

There are two different price validations for orders, both considering the most recent best bid and best ask price.

3.9.2.1 Price Reasonability Check

When entering or replacing an order, the user may opt for a check ensuring that the entered price does not differ significantly from the market. For using the price reasonability check functionality the field *ValueCheckType* (1869) in the component <ValueChecksGrp> has to be set to "1" (*Price check*). The field *ValueCheckAction* (1870) provides the following options:

- Valid value "0" = Do not check
- Valid value "1" = Check
- Valid value "2" = Best effort (only for T7 Derivatives)

The value "best effort" defined only for **T7 Derivatives** differs from the value "check" in the following way: If the best bid and best ask prices are not available or if their spread is not reasonable, an additional reference price (the last traded price or the theoretical price) is taken into account. If the additional reference price is also not available, the incoming order or quote is

- accepted without performing a price validation in case the submitting user choose "best effort", or
- rejected in case the submitting user chooses "check".

3.9.2.2 Extended Price Range Validation

In case no price reasonability check was performed, the extended price validity check is applied which ensures that no erroneous price crosses through the market.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.3 Notional Value and Quantity Checks

When entering or replacing an order, additional checks may be activated to prevent orders with a too large value (notional value check) or with a too large order size (quantity check) from entering the order book.

The *notional value check* functionality prevents orders with a too large order value from entering the order book. The validation verifies the order value against the maximum order value limit set by the participant for their traders.

The *quantity check* functionality prevents orders with a too large order size from entering the order book. The validation verifies the order quantity against the maximum order quantity limit set by the participant for their traders. (Iceberg orders and Volume Discovery orders will be validated with the full order quantity when entering the order book.)

The execution of these validations depends on the values entered in the component <ValueChecks-Grp>:

Validity check	Deriv- atives	Cash	ValueCheckType (1869)	ValueCheck- Action (1870)	Additional Infor- mation
Notional Value Check	✓	✓	"2" (Notional value check)	"0" (Do not check) "1" (Check)	-
Quantity Check		√	"3" (Quantity check)	"0" (Do not check) "1" (Check)	Entry not allowed for T7 Derivatives. For T7 Derivatives the quantity valida- tion will be always performed and cannot be deacti- vated.

T7 FIX Gateway	6 August 2021		
T7 FIX Gateway Manual (FIX 4.4)	V10.0		

3.9.4 Cancellation

The FIX session may only cancel orders that have been entered previously via the same session and, for T7 Boerse Frankfurt, also orders entered by the Specialist on-behalf of the customer business unit for the session.

Cancelling an order will remove the remainder of a live order from the order book. The participant must use the *OrigClOrdID* (41) to identify the order to cancel. The T7 FIX Gateway will respond with an *ExecutionReport* (8) or *OrderCancelReject* (9) message for confirmation or rejection respectively.

Participants can also submit a *UserOrderMassActionRequest (UCA)* in order to delete all active orders for the respective session in a given product. The *UserOrderMassActionRequest (UCA)* can be further restricted to a defined trader and/or a defined instrument. The user may delete only part of their orders for one instrument by entering the additional filter criteria side and price.

3.9.5 Modification

The FIX session may only modify orders that have been entered previously via the same session and, for T7 Boerse Frankfurt, also orders entered by the Specialist on-behalf of the customer business unit for the session.

The participant must use the OrigClOrdID (41) to identify the order to modify.

The T7 FIX Gateway will respond with an *ExecutionReport (8)* or *OrderCancelReject (9)* message for confirmation or rejection respectively.

The ExecutionReport (8) will contain ExecRestatementReason (378) = 181 (ownerschip changed) if the order ownership was changed. This will be the case if the submitter (Entering Trader) of the modify request is different from the original owner of the order.

Orders that have been completely filled may not be modified anymore.

<u>Note:</u> Modifications of the total order quantity to a quantity less than or equal to the cumulated executed order quantity will be interpreted as a cancel request.

3.9.6 Self Match Prevention

The Self Match Prevention (SMP) functionality allows participants to prevent an execution of an incoming order against a book order or quote side from the same business unit in the same instrument (crossing).

Participants can specify an individual Self Match Prevention ID in the field *MatchInstCrossID* (28744) which is contained in the component <MtchInst> (Matching Instructions).

The ExecutionReport (8) will contain the field CrossedIndicator (2523) with the valid value 1 (Cross rejected) if the order was deleted or modified due to SMP.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.7 Account Structure

The mandatory field *TradingCapacity (1815)* specifies the relationship between the market participant and the order.

Business Type	Deriv- atives	Cash	Description	Relevant FIX Tags
Agency	✓	✓	Market Participant is trading on behalf of its customer.	TradingCapacity (1815) = 1
Issuer/Liquidity Provider		✓	Market Participant is acting as an Issuer/Liquidity Provider.	TradingCapacity (1815) = 3
Proprietary	✓	✓	Market Participant is trading for its own account.	TradingCapacity (1815) = 5
Market Making	✓	✓	Market Participant is acting as a Market Maker.	TradingCapacity (1815) = 6
Riskless Principal		✓	Market Participant is acting on his own name for a foreign account.	TradingCapacity (1815) = 9

The usage of the field *Account (1)* will be supported only for **T7 Derivatives**:

The entry of a T7 account type and number is supported via the *Account (1)* field designating the account type to be used for the order when submitted to clearing. There are three types of accounts:

- Agent accounts: "A1", "A2", "A3", "A4", "A5", "A6", "A7", "A8", "A9", "G1" and "G2": The account codes G1 and G2 are actually designations that the trade is going to be sent to another member, usually when a participant uses one member to perform the execution and another to do the clearing.
- Proprietary accounts: "P1" and "P2".
- Market Maker accounts: "M1" and "M2".

Every order entered into the T7 trading system can be associated with one of these account types.

In case that no account information is entered by the market participant the clearing account information will be derived from the field *TradingCapacity* (1815).

3.9.8 Text Fields

The T7 trading system supports four free-format text fields for trader-specific comments to an order. The mapping of the T7 text fields to the FIX tags is as follows:

Text Field	Deriv- atives	Cash	Relevant FIX Tags
Free Text Field 1	✓	✓	Text (58)
Free Text Field 2	✓	✓	FreeText2 (25008)
Free Text Field 3	✓		FreeText3 (25009)
Free Text Field 4		✓	FreeText4 (25107)

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.9 Order Status and Execution Report

The ExecutionReport (8) message is used to communicate events that affect an order.

The field *ExecType (150)* specifies the type of event. The field *OrdStatus (39)* specifies the new status of the order.

The different scenarios and their usage of the OrdStatus (39) and ExecType (150) are as follows:

Scenario	Deriv- atives	Cash	OrdStatus (39)	ExecType (150)
Order book replay: Transmission of all active orders	✓	✓	0 = New 1 = Partially filled	D = Restated
Order book replay: Transmission of inactivated auction orders	✓	✓	9 = Suspended	D = Restated

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.10 ExecutionReport (8) "Request Status Unknown"

As described in **3.8 Pending Responses** "Request Status Unknown" there are situations, in which the T7 FIX Gateway will generate "request status unknown" pending *ExecutionReport (8)* messages as response to the order requests.

The different scenarios for the order requests and their usage of the fields *OrdStatus (39)*, *ExecType (150)* and *ExecRestatementReason (378)* in the *ExecutionReport (8)* messages sent by the T7 FIX Gateway are as follows:

Scenario	OrdStatus (39)	ExecType (150)	ExecRestatementReason (378)
Submission of an Order - Order status is un-known	A = Pending New	A = Pending New	100 = Unknown Order State
Cancellation of an Order - Order status is unknown	6 = Pending Cancel	6 = Pending Cancel	100 = Unknown Order State
Modification of an Order - Order status is un- known	E = Pending Replace	E = Pending Replace	100 = Unknown Order State

3.9.11 Order Book Restatement

During the start-of-day phase and after a market reset event (an exchange system failure), all active orders of a session will be transmitted to the market participant via the respective session.

During Order Book Restatement *ExecutionReport (8)* messages for each restated order of the corresponding session are provided and finally a *TradingSessionStatus (h)* message indicates the end of the restatement per product; see **chapter 3.9.16 Trading Session Events**.

The reason for the restatement is communicated in field *ExecRestatementReason (378)* in message *ExecutionReport (8)*.

Each end of restatement message initiates the start of trading for a product.

ExecRestatementReason (378) will have the value "1" (GT renewal / restatement).

<u>Note:</u> In case an ETI session associated to a FIX session is canceled by the member all orders which were entered via this session and are still valid will be deleted without any further notification to the customer. Therefore these orders will not be restated.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.12 Passive Liquidity Protection (PLP)

Passive Liquidity Protection (PLP) strengthens order book trading for specific products. Aggressive order transactions will be deferred by a time interval in the order before they are able to interact with the order book. Non-agressive order transactions will directly impact the order book without deferral.

A mass cancellation affects deferred aggressive orders by changing the order type to IOC (immediate or cancel). This ensures that, if the order is not filled after the deferral, this will be deleted.

The information about the change of the order type to IOC (Immediate or Cancel) will be provided in the field *ExecRestatementReason (378)* of the corresponding modify *ExecutionReport (8)* message:

Scenario	ExecRestatementReason (378)
Order has been changed to IOC	114

3.9.13 Trailing Stop Order Update Notifications (T7 Cash)

Notifications generated by the trading system about the update of the field *StopPx (99)* for trailing stop orders are communicated to the participants via a modify *ExecutionReport (8)*.

The reason for the order update is provided in the field *ExecRestatementReason (378)* of the *Execution-Report (8)* message:

Scenario	ExecRestatementReason (378)
Trailing Stop Update	213

3.9.14 Unsolicited Order Cancellations generated by the Trading System (T7 Cash)

Notifications about unsolicited order cancellations generated by the trading system are communicated to the participants via a cancel *ExecutionReport (8)*.

The reason for the order cancellation is provided in the field *ExecRestatementReason (378)* of the *ExecutionReport (8)* message:

Scenario	ExecRestatementReason (378)
GT corporate action	0
Exchange Option	8
End of Day Processing	146
Order Expiration Intraday	148
Exceeds maximum quantity	237
Invalid Limit Price	238

T7 FIX Gateway	6 August 2021	_
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.9.15 Mass Cancellation Notification

Mass cancellation notification is not provided on a single order level. The owning session will be informed about the scope of the cancellation by a summary record. The summary record will also provide the entering party involved and the reason for the mass cancellation. For T7 Cash the summary record contains additionally an order list with the information about the deleted persistent orders (if any).

Unsolicited order mass cancellation is communicated by the T7 FIX Gateway via the *OrderMassAction-Report (UBZ)* message.

The reason for the mass cancellation event is communicated in field *MassActionReason (28721)*, the scope of the deleted orders in field *UExecInst (30018)*.

Orders that couldn't be canceled due to an incompatible instrument state are provided in the component <NotAffectedOrdersGrp>. For each order the Exchange Order ID (*NotAffectedOrderID* (1371)) is delivered. For messages generated via Trading session the component contains for each order additionally the corresponding FIX Client Order ID (*NotAffOrigClOrdID* (1372)). This field will be set to "[N/A]" for messages delivered via Back-office session.

For T7 Cash persistent orders that were canceled are provided in the component <AffectedOrdersGrp>. For each order the Exchange Order ID (*AffectedOrderID (535)*) is delivered. For messages generated via Trading session the component contains for each order additionally the corresponding FIX Client Order ID (*AffectedOrigClOrdID (1824)*). This field will be set to "[N/A]" for messages delivered via Back-office session.

The number of entries in the components <AffectedOrdersGrp> and <NotAffectedOrdersGrp> is limited. For this reason the information about a Mass Cancellation event can be split into several *Order-MassActionReport (UBZ)* messages. The message *OrderMassActionReport (UBZ)* contains the field *ULastFragment (30893)* to indicate if the message is the last message related to an event (*ULastFragment (30893)* = *Y (Last message)*) or if additional messages will follow (*ULastFragment (30893)* = *N (Not last message)*).

The following unsolicited mass cancellation events may occur:

Mass Cancellation Event	MassActionReason (28721)	Deriv- atives	Cash
Product Holiday	Product State Holiday (106)	✓	✓
Product Halt	Product State Halt (105)	✓	\checkmark
Instrument Suspension	Instrument Suspension (107)	✓	\checkmark
Strategy Cancellation	Strategy Cancellation (109)	✓	
Volatility Interruption Product Level	Circuit Breaker (Volatility Interrupt) (110)	✓	
Volatility Interruption Instrument Level	Circuit Breaker (Volatility Interrupt) (110)	✓	✓
Product temporarily not tradeable	Product temporarily not tradeable (111)	✓	✓
Instrument stopped	Instrument Stopped (113)		✓
Instrument knock out	Instrument knock out (115)		\checkmark
Instrument sold out	Instrument sold out (116)		\checkmark
Member disabled	Member has been disabled (117)	✓	
Instrument knock out reverted	Instrument knock out has been reverted (118)		✓
Automatic deletion of Quotes	Automatic deletion of Quotes (119)		\checkmark

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

Additional events related to technical reasons are also possible. See complete list of values for the field *MassActionReason (28721)* in the description of message *OrderMassActionReport (UBZ)*.

Quotes are always canceled by mass cancellation events.

The information about the scope of the deleted orders as result of the event is delivered in the field UExecInst (30018) in message OrderMassActionReport (UBZ):

UExecInst (30018)	Persistent Orders	Non-persistent Orders
not provided	No	No
н	Yes	No
Q	No	Yes
HQ	Yes	Yes

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.9.16 Trading Session Events

The *TradingSessionStatus* (h) message is used by the T7 FIX Gateway for all session related events. Trading session events might imply mass cancellation events, where no explicit mass cancellation notifications are provided.

The information about the scope of the orders deleted implicitly for the different session related events is summarized in following table:

Event	Level	TradSesEvent (1368)	Persistent Orders	Non-persistent Orders
Market Reset	XMIC	Market reset (102)	No	Yes
End of Restatement	Product	End of restatement (103)	No	Yes
Service Resumed	Product	Service resumed (105)	No	Yes
End of Service	XMIC	No more messages for this trading venue (200)	No	Yes
End of Service	FIX session	Message transmission ended (201)	No	Yes
Session Disconnect	XMIC	Message processing suspended (202)	No	Yes
Session Connect	XMIC	Message processing resumed (203)	No	Yes

- Market Reset: informs the participant that the matching engine has been restarted; this event can affect only some products of the related exchange (XMIC).
- End of Restatement: implies that all non-persistent orders of the session in a product have been canceled; in this case no individual cancellation notifications are provided on individual order level.
- Service Resumed: informs the participant that the matcher has started accepting transactions after a slow partition event. All non-persistent orders of the session in a product have been canceled.
- **End of Service**: informs the participant about the end of message transmission for an exchange (XMIC) within a FIX session or for the whole FIX session.
- Session Disconnect: informs the participant about the disconnection of the ETI session.
- Session Connect: informs the participant about the (re)connection of the ETI session.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.10 Trade Capture

3.10.1 Trade Capture via Back-Office Session

T7 Derivatives and T7 Cash trading participants will use Back-office sessions to receive trade confirmations (on-book and off-book) for the business unit.

The scope for all *User/TradeCaptureReport (UAE/AE)* messages will be the business unit. All trade information the business unit is authorized to see will be provided within one stream. For clearing business units this feature includes the provision of all trade information for all of their non-clearing business units.

After a Back-office FIX session logon, the transmission of already existing trades of the current business day can be requested via *ResendRequest* (2).

Newly generated trades and trade reversals on the T7 trading system will automatically be transmitted via the Back-office FIX session.

For more details see chapter 6.11.1 Trade Capture via Back-Office Session.

3.10.2 Trade Capture via Trading Session (T7 Cash)

The T7 Cash participants can use the FIX Trading session for the T7 Entry Service (TES).

The FIX messages used for the implementation of the TES message flows via the FIX Trading sessions for T7 Cash are:

- TES Requests (Enter, Modify, Delete Approve): User/TradeCaptureReport (UAE/AE)
- TES Responses: User/TradeCaptureReportAck (UAR/AR)
- TES Broadcasts (Enter, Modify, Delete Approve, Execution): User/TradeCaptureReport (UAE/AE)

Please note that the trades resulting from TES entries will be delivered only via FIX Back-office sessions. For more details see chapter **6.11.2 Trade Capture via Trading Session (T7 Cash)**.

3.10.3 T7 Entry Service (TES)

The T7 Entry Service (TES) enables participants to enter off-book transactions into the T7 system. The usage of this service is different for both market types (T7 Derivatives and T7 Cash).

T7 Derivatives

For T7 Derivatives participants this service is not offered via the FIX interface, but trades generated from TES entries will be delivered via FIX Back-office sessions. For these trades the FIX Gateway will generate *User/TradeCaptureReport (UAE/AE)* messages.

T7 Cash

T7 Cash participants will use Trading sessions for the T7 Entry Service (TES). This service enables T7 Cash trading participants to enter off-book trades. Back-office sessions will be used to receive on-book and off-book trade confirmations. The TES message flows via the Trading session will be presented in chapter **6.11.2.4 TES Message Flows**.

3.10.4 Xetra/Eurex EnLight

Trade confirmations related to Xetra/Eurex EnLight transactions will be delivered via FIX Back-office sessions. These will be *User/TradeCaptureReport (UAE/AE)* messages with *TrdType (828) = 1006 (Xetra/Eurex EnLight triggered trade)* and a link to the corresponding Xetra/Eurex EnLight deals in the field *NegotiationID (28758)* and in the component <SRQSRelatedTradeIDGrp>.

See more information in 3.19 Xetra/Eurex EnLight - Selective RFQ Platforms.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.10.5 Trade Capture Report - Identification Criteria

3.10.5.1 Trade Types

The field *TrdType (828)* is used to identify an on-book and off-book trade. To identify an on-book trade *TrdType (828)* will be set to "0" (*Regular Trade (on-book)*. Other values identify an off-book trade.

Back-Office Session:

For T7 Derivatives and T7 Cash the different trade types can be identified via the field *TrdType (828)*:

Trade Type	TrdType (828)	Deriv- atives	Cash
On-book	0 = Regular Trade (on-book)	✓	✓
Off-book	1 = Block Trade	✓	
	12 = Exchange for Swap (EFS)	✓	
	50 = Portfolio Compression Trade	✓	
	54 = OTC		✓
	1000 = Vola Trade	\checkmark	
	1001 = Exchange for physical (EFP) Fin trade	\checkmark	
	1002 = Exchange for physical (EFP) Index Future trade	\checkmark	
	1004 = Trade at market	✓	
	1005 = Large in scale		\checkmark
	1006 = Xetra/Eurex EnLight triggered trade	\checkmark	✓
	1007 = QTPIP Block Trade	✓	

Trading Session (T7 Cash):

Following values can be used via Trading Session to identify a TES trade:

Trade Type	TrdType (828)	Deriv- atives	Cash
TES Trade	54 = OTC		✓
	1005 = Large in scale		✓

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.10.5.2 Trade Report Types

The field *TradeReportType (856)* indicates the type of the Trade Capture Report.

Back-Office Session:

For on-book and off-book trade confirmations via Back-office session following scenarios are possible:

Scenario	TradeReportType (856)	Deriv- atives	Cash
Final Trade	0 = Submit	\checkmark	✓
Preliminary Trade	1 = Alleged	\checkmark	
Modified Trade	5 = No/Was (Replaced)	\checkmark	✓
Trade Reversal	7 = (Locked-In) Trade Break	✓	✓

Trading Session (T7 Cash):

Following values are used for the T7 Entry Service (TES) via Trading session:

TES Message Type	TradeReportType (856)	Deriv- atives	Cash
Enter Request	0 = Submit		✓
Modify Request	5 = No/Was (Replaced)		✓
Enter / Modify Broadcast	0 = Submit 5 = No/Was (Replaced) 11 = Alleged New 13 = Alleged New/Was		√
Approve Request	2 = Accept		✓
Approve Broadcast	2 = Accept		✓
Delete Request	6 = Trade Report Cancel		✓
Delete Broadcast	6 = Trade Report Cancel		✓
Execution Broadcast	2 = Accept		\checkmark

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.10.5.3 Message Event Source

The field *MessageEventSource* (1011) is used in *User/TradeCaptureReport* (*UAE/AE*) messages sent to the customers. The field describes the event that caused the creation of the message and can be used to distinguish the messages of the different message flows.

Back-Office Session:

The *User/TradeCaptureReport (UAE/AE)* message in the Back-office session is used to receive trade confirmations (off-book and on-book).

Trade Type	MessageEventSource (1011)	Deriv- atives	Cash
on-book	200 = On-Book Trade Notification	\checkmark	✓
off-book	201 = TES Trade Notification	\checkmark	✓

Trading Session (T7 Cash):

The *User/TradeCaptureReport (UAE/AE)* message in the Trading session can be used by the T7 Cash trading participants for the T7 Entry Service (TES).

TES Message Type	MessageEventSource (1011)	Deriv- atives	Cash
Enter / Modify Broadcast	202 = TES Broadcast to Initiator - Approve Pending		\checkmark
Enter / Modify Broadcast	203 = TES Broadcast to Initiator - Approve Finished		\checkmark
Delete Broadcast	204 = TES Broadcast to Initiator - Canceled		\checkmark
Enter / Modify Broadcast	205 = TES Broadcast to Approver - Approve Pending		\checkmark
Approve Broadcast	206 = TES Broadcast to Approver - Approved		\checkmark
Execution	207 = TES Broadcast to Approver - Executed		\checkmark
Delete Broadcast	208 = TES Broadcast to Approver - Canceled		\checkmark

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.10.6 Trade Reconciliation (On-Book Trades)

There are several identifiers that can be used to associate an *ExecutionReport* (8) with *User/Trade-CaptureReports* (*UAE/AE*) and public trades on the market data interface.

Every **match event** with one or more executions (match steps) in a simple or complex instrument results in one *ExecutionReport* (8) message per matching step for each order. A *User/TradeCaptureReport* (*UAE/AE*) will then be sent to confirm each trade at each price level.

For complex instruments (only T7 Derivatives), there is a *User/TradeCaptureReport (UAE/AE)* for each leg execution of the instrument.

Every **match step** occurring in the exchange has an identifier that is provided in the field *TrdMatchID* (880) in the *ExecutionReport* (8) as well as in the *User/TradeCaptureReport* (UAE/AE). This identifier allows participants to link Trade Capture Reports and the corresponding Execution Report.

The *TradeID* (1003) field in the *User/TradeCaptureReport* (*UAE/AE*) uniquely identifies all allocations referring to the same matching event, instrument and price.

The field *SideTradeID* (1506), which is unique for a product and business day, in the *User/TradeCapture-Report* (*UAE/AE*) provides the private identifier of an order match event, which can easily be reconciled with the corresponding *ExecutionReport* (8) for orders in the following way:

- for order match events in simple instruments, the *ExecutionReport (8)* message provides a private execution identifier, *SecondaryExecID (527)*.
- for order match events in complex instruments (only T7 Derivatives) the *ExecutionReport (8)* message provides the order execution ID on each price level and additionally the order leg execution ID, *LegExecID (1893)*.

Match Reporting	Deriv- atives	Cash	ExecutionReport (8)	User/TradeCapture- Report (UAE/AE)
Trade event on instrument level: public trade volume reporting.	✓	✓	TrdMatchID (880)	TrdMatchID (880)
Identifier for all allocations referring to the same instrument.	✓	✓		TradeID (1003), OrigTradeID (1126)
Private execution identifier in Order in a simple instrument.	✓	✓	SecondaryExecID (527)	SideTradeID (1506)
Private execution identifier for an order in a complex instrument. (only T7 Derivatives)	√		LegExecID (1893)	SideTradeID (1506)
System Order ID generated by the T7 System.	✓	✓	OrderID (37)	OrderID (37)
Unique identifier of the order. The Client Order ID of the T7 Enhanced Trading Interface (ETI) is provided.	✓	✓	SecondaryOrderID (198)	SecondaryOrderID (198)

Note: For trade reversals a new *TradeID* (1003) is generated by the T7 trading system. The original trade identifier is delivered in field *OrigTradeID* (1126) and provides the link to the original trade.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.10.7 Best Practices for Order Management

All order response information in the T7 FIX Gateway is sent out immediately after the order has been processed by the core matching process.

All order response information in the T7 FIX Gateway is preliminary; this includes *ExecutionReports (8)* sent out for persistent and non-persistent orders.

For these reasons, a participant application always needs to confirm the preliminary execution information with the corresponding legally binding *User/TradeCaptureReport (UAE/AE)*.

Please find detailed information regarding trade reconciliation in **chapter 3.10.6 Trade Reconciliation**.

User/TradeCaptureReports (UAE/AE) are not delivered via Trading FIX sessions. For the reception of the legally binding *User/TradeCaptureReports (UAE/AE)* a Back-office FIX session is required.

Back-office FIX sessions need to be ordered by the participants for its business units in the Eurex Member Section for Derivative Markets and in the Xetra Member Section for Cash Markets.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.11 Cross Request

The Cross Request offers two facilities: **Cross Trade Announcement** and **Client Liquidity Improvement Process (CLIP)**. The *Cross Trade Announcement* is provided for both market types (T7 Derivatives and T7 Cash). The *Client Liquidity Improvement Process (CLIP)* is provided only for T7 Derivatives market.

The type of the Cross Request can be identified via *CrossRequestType (28771)*. The field *CrossRequestID (2672)* is the unique message identifier of a Cross Request.

3.11.1 Cross Trade Announcement

With the **Cross Trade Announcement** the participant can announce a Cross Trade by using the message *CrossRequest (UDS)* with *CrossRequestType (28771) = "1" (Cross Announcement)*. A Cross Trade is a trade where a participant trades against an own order in the order book. In a prearranged trade, orders from at least two participants are executed against each other as previously negotiated.

The Cross Request contains the security identification (product and instrument id combination) and the *OrderQty (38)*, which is mandatory for regulatory reasons.

A trader sends the T7 FIX Gateway message *CrossRequest (UDS)* which is published via the T7 Market Data Interface (MDI) to all other participants, to alert them of the intention to trade with an own order or pre-arranged trade.

Cross and pre-arranged trades may not knowingly be entered into the T7 trading system by a participant, unless the participant precedes the cross or pre-arranged trade with a cross request.

3.11.2 Client Liquidity Improvement Process (CLIP) (T7 Derivatives)

The Client Liquidity Improvement Process (CLIP) enhances the ability of brokers to execute a client order by using the message CrossRequest (UDS) with CrossRequestType (28771) = "2" (Liquidity Improvement Cross).

With a CLIP request the broker can execute a client order against another broker (**bilateral** CLIP request) or against himself (**unilateral** CLIP request), under the consideration of potential price advantages for client order in matches against the central order book.

A CLIP request can be entered by using the message *CrossRequest (UDS)* with *CrossRequestTransType (28772) = "0" (New)*.

A **bilateral** CLIP request is entered via two separate one-sided *CrossRequest (UDS)* messages, one for the client and one for the broker order, identified by different values of the field *InputSource (979)*.

A **unilateral** CLIP request is entered via a unique two-sided *CrossRequest (UDS)* message. The two sides contain the information about the client and the broker order, identified repectively by the content of the field *InputSource (979)*.

A CLIP request can be deleted by using the message *CrossRequest (UDS)* with *CrossRequestTransType (28772) = "1" (Cancel)*.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

In case of an execution an *ExecutionReport (8)* with *MatchType (574) = "13" (Liquidity Improvement Cross)* will be sent. The different scenarios related to orders resulting from CLIP entries are described by different values of the field *ExecRestatementReason (378)* in the *ExecutionReport (8)*:

Scenario	ExecRestatementReason (378)
Execution	340 = CLIP execution after improvement period
Cancellation due to start of closing auction	122 = Instrument State Change
Cancellation after exposure time	343 = CLIP request canceled by arrangement time out
Cancellation	344 = CLIP cancellation

After the successful validation of the CLIP request information (client and broker sides), all market participants are informed about an imminent execution of a client flow and have the opportunity of submitting orders or quotes during a defined price improvement period.

After the conclusion of the price improvement period the execution process will be initiated, which includes the conversion of the client CLIP and broker CLIP sides into orders and the execution of the client order according to the general matching rules. This ensures that the client order will be matched at the agreed price level or even better, depending on the market situation in the central order book after the price improvement period.

Orders resulting from CLIP requests are processed internally as lean orders. For this reason there is no Drop Copy information via FIX Back-office sessions for CLIP entries, executions and cancellations.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.12 Quote Request Functionality

The Quote Request Functionality can be used by a trader to request Public and Private Quotes for a specified instrument. In both cases the message *QuoteRequest (R)* will be used. The Private Quote functionality is only supported in T7 Boerse Frankfurt (Boerse Frankfurt and Boerse Frankfurt Zertifikate).

The field *PrivateQuote* (1171) in the message *QuoteRequest* (*R*) is used to distinguish between requests for public and for private quotes. If this field is missing, a *QuoteRequest* (*R*) message will be processed as a request for a public quote.

3.12.1 Request for Public Quotes

For **T7 Derivatives** all requests for public quotes are published via the market data interface to all other participants.

For **T7 Cash** traders can choose to publish requests for public quotes to all market participants via the market data interfaces, to market makers and designated sponsors only via the trading interfaces, or a combination thereof.

Every *QuoteRequest (R)* message contains the security identification (see details in **chapter 3.4 Security Identification**). *Side (54)* and *OrderQty (38)* are optional attributes.

A *QuoteRequest (R)* message might be rejected with an error message indicating a previous request for quote has already recently been sent.

A *QuoteRequest (R)* message is validated against the available quantities at the best price and the corresponding bid/ask spread in the market.

Summary of the different scenarios (for more details see **chapter 6.9.5 Quote Request Functionality** - **Message Flows**):

Scenario	Description
Successful Public Quote Request	The customer will receive a Mass/QuoteAcknowledgement (b) message with QuoteStatus (297) = 0 (Accepted)
Rejected Public Quote Request	The customer will receive a User/QuoteRequestReject (UAG/AG) message.
Pending Response for a Public Quote Request	In some situations the T7 FIX-Gateway will generate pending responses via the message Mass/QuoteAcknowledgement (b) with QuoteStatus (297) = 10 (Pending). See details in 3.8 Pending Responses "Request Status Unknown".

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.12.2 Request for Private Quotes (T7 Cash - T7 Boerse Frankfurt)

With the Private Quote Request the customer is requesting a private quote from the instrument's Specialist. The quote from the Specialist is distributed privately only to the customer that sent the request. The response must be sent by the Specialist within a certain time limit (depending on configuration in T7 Backend), otherwise the quote request is rejected by the T7 System and deleted.

Summary of the different scenarios (for more details see **chapter 6.9.5 Quote Request Functionality** - **Message Flows**):

Scenario	Description
Successful Private Quote Request	The customer will receive a <i>Quote (S)</i> message with a unique quote-identifier in the field <i>QuoteID (117)</i> .
	The customer can send an especially marked NewOrderSingle (D) with a reference to the quote in the field QuoteID (117) to request the execution of a trade for the Private Quote.
	If the Specialist does not execute the order with a <i>QuoteID (117)</i> within a dedicated time frame, the order is deleted automatically by the T7 System. In this case the customer will receive a delete <i>ExecutionReport (8)</i> with <i>ExecRestatementReason (378) = 316 (Quote Request Solution Order Expiry)</i> .
	If the Specialist executes the order, the customer will receive a fill <i>ExecutionReport (8)</i> with a reference to the quote-id in the fields <i>RefOrderID (1080)</i> and <i>RefOrderIDSource (1081)</i>
Rejected Private Quote Request	The customer will receive a User/QuoteRequestReject (UAG/AG) message.
Pending Response for a Private Quote Request	In some situations the T7 FIX-Gateway will generate pending responses via the message Mass/QuoteAcknowledgement (b) with QuoteStatus (297) = 10 (Pending).
	See details in 3.8 Pending Responses "Request Status Unknown".

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.13 Pre-Trade Risk Limits (T7 Derivatives)

The *UserPartyRiskLimitsRequest (UCL)* is used to inquire pre-trade risk limits. These limits can be defined for on-book or off-book trading on product, exchange and user risk group level.

The requested pre-trade risk limits will be communicated via *UserPartyRiskLimitsReport (UCM)*.

For more information see chapter 6.10.1 User Party Risk Limits Request.

3.14 Risk Control Event Notifications

The FIX Gateway supports the dissemination of Risk control event notifications on both the Trading and Back-office sessions.

The following notifications are available:

Risk Control Event Notification	Deriv- atives	Cash
Stop Button Event	\checkmark	✓
Limit Breach Event	\checkmark	
Legal Notification	✓	

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.15 Mass Deletion Request

The *UserOrderMassActionRequest (UCA)* will allow deletion of multiple orders. Orders may be filtered by Product identifier (Symbol) or Product identifier (Symbol) and Security identifier (SecurityID).

Note: The *ProductComplex (1227)* will not be allowed on this request as no filtering by instrument type will be supported. It is not possible - for example - to restrict a mass cancellation operation to "Standard Option Strategies".

The user may delete orders owned by a different trader. In this case the owning trader of the orders to be deleted must be provided in the party <target executing trader>.

Users may delete only part of their orders for one instrument by entering the additional filter criteria side and price. For the buy side the orders will be deleted starting from the highest price until the price specified in the filter, for the sell side starting from the lowest price.

The request will be answered by one or more *UserOrderMassActionResponse (UCAR)* messages having *MassActionResponse (1375)* set to "2" (Completed), if successful.

A rejected request will be answered by a *UserOrderMassActionResponse (UCAR)* message having *MassActionResponse (1375)* set to "0" (*Rejected*) and providing an error code/explaining text in *Return-Code (25023) / ReturnCodeText (25025)* respectively.

Additional information in the response message *UserOrderMassActionResponse (UCAR)* for requests processed successfully:

- Orders that couldn't be canceled due to an incompatible instrument state are provided with their Exchange Order ID (*NotAffectedOrderID* (1371)) and with their FIX Client Order ID (*NotAffOrig-ClOrdID* (1372)) in the component <NotAffectedOrdersGrp>.
- For T7 Cash persistent orders that were canceled are provided with their Exchange Order ID (*AffectedOrderID* (535)) and with their FIX Client Order ID (*AffectedOrigClOrdID* (1824)) in the component <AffectedOrdersGrp>.
- The number of entries in the components <AffectedOrdersGrp> and <NotAffectedOrdersGrp> is limited. For this reason the response to a Mass Cancellation Request can be split into several *UserOrderMassActionResponse (UCAR)* messages. The message *UserOrderMassActionResponse (UCAR)* contains the field *ULastFragment (30893)* to indicate if the message is the last response message related to a Mass Cancellation Request (*ULastFragment (30893) = Y (Last message)*) or if additional messages will follow (*ULastFragment (30893) = N (Not last message)*).

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.16 Session Details List

The SessionDetailsList (U6) message provides the list of ETI sessions of the own business unit for a specific exchange. This message will be delivered for T7 Cash and Derivatives only via Back-office sessions.

SessionDetailsList (U6) will be sent after the establishment of the connection to the T7 trading system, which is indicated by a *TradingSessionStatus* (h) message with *TradSesEvent* (1368) = 203 (Message processing resumed).

Each ETI session will be categorized into different types identified by the field SessionMode (28730).

The information contained in the *SessionDetailsList* (*U6*) message can be used to identify the source of the *User/TradeCaptureReport* (*UAE/AE*) and *ExecutionReport* (*8*) messages provided via FIX Back-office sessions based on the content of the party fields < tcr session id> and < session id>.

In case a FIX session is configured for several XMICs (e.g. XETR + XVIE) the message *SessionDetailsList (U6)* will be gerated for each XMIC.

There will be no possibility for the customer to deactivate the reception of this message.

3.17 Drop Copy for Order Information (Business Unit Level)

Drop copy functionality for standard (not lean) orders of a business unit of the current business day is provided as an optional feature of the Back-office FIX session.

When the client chooses the drop copy feature for a Back-office FIX session in the Member Section, the order-information of the current business day for standard (not lean) orders of the business unit is provided on a stream basis:

- After a Back-office session logon, the transmission of the already existing active standard orders for the current business day can be requested via *ResendRequest (2)*.
- Newly generated messages for standard (not lean) orders on the back end will automatically be transmitted via the Back-office FIX session.
- All drop copy information for standard (not lean) orders will be sent via FIX messages (*Execution-Report (8)*, *UserOrderMassActionReport (UBZ)*).

Note: Messages for orders entered via the T7 FIX Gateway will provide the *ClOrdID* (11) in the *ExecutionReport* (8) message of the Drop Copy functionality for standard (not lean) orders. *OrigClOrdID* (41) will not be provided.

Orders entered via High Frequency ETI Sessions will not be provided.

For orders immediately triggered after being entered or modified the value of the stop price is not available. The *ExecutionReports* (8) with ExecType (150) = 0 (New) and 5 (Replaced) will contain in this case StopPx (99) = -1.

For iceberg orders immediately filled or partially filled after being entered or modified the original value of the display quantity is not available. The *ExecutionReports* (8) with *ExecType* (150) = 0 (New) and 5 (Replaced) will contain in this case *DisplayQty* (1138) = -1.

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.18 Regulatory Requirements - MiFID II Functionality

Following chapters summarize the T7 FIX Gateway implementation to support the MiFID II requirements.

3.18.1 Short Code Solution

The concept of the "Short Codes" will be used to allow customers to encode reporting information into numeric codes.

The relevant messages will contain only the Short Codes (not all data required for reporting purposes).

The link between the Short Codes and the corresponding reporting information will be provided by the customers separately, not via the T7 FIX Gateway.

3.18.2 Audit Trail and ALGO Flags

The implementation of the MiFID II requirements is based on the concept of the "Short Codes".

With MiFID II more information shall be available for supervisory authorities such as BaFin in Germany. Additionally the algorithmic nature of the orders and quotes involving equities has to be reported according to MiFID regulations.

For both purposes specific fields are defined in different message structures.

3.18.2.1 Client Identifier

The Client Identifier (Client ID) identifies the client of the trading member. Its content is encoded by members on request entry using either the short code to identify the person or the numeric identifier of algorithm (some values are reserved by FIX) and can be de-coded for reporting proposes to:

- <algo id> = algorithm identifier
- <short code> = LEI (Legal Entity Identifier)
- <short code> = National ID
- 0 = "NONE" (no client order)
- 1 = "AGGR" (aggregated order)
- 2 = "PNAL" (allocation to client still pending)

The Client ID is mandatory for agent orders.

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.18.2.2 Execution Identifier

The field *Executing Trader* contains the short code to identify the person or the numeric identifier of algorithm within the member or participant of the trading venue who is responsible for execution of the transaction resulting from the user.

FIX has reserved the short code "3" = "CLIENT" for the field Executing Trader whenever the client actually instructed the trader.

If a FIX request does not contain the information about the Execution Identifier (i.e. no Executing Trader and Executing Trader Qualifier are provided) it means that the execution decision was taken within the member firm and that the decision maker is the trader submitting the order.

The field *Executing Trader Qualifier* indicates the nature of the value provided in the field Executing Trader. <u>Note:</u> the field Executing Trader Qualifier can be used without a corresponding Executing Trader.

3.18.2.3 Investment Identifier

The field *Investment Decision Maker* contains the short code to identify the person or the numeric identifier of algorithm within the member or participant of the trading venue who is responsible for the investment decision.

The field *Investment Decision Maker Qualifier* indicates the nature of the value provided in the field Investment Decision Maker. <u>Note:</u> the field Investment Decision Maker Qualifier can be used without a corresponding Investment Decision Maker.

3.18.3 Market Making

The Liquidity Provision Flag can be used by market makers to flag their orders entered under the market making scheme agreement.

The Liquidity Provision Flag is optional for all account types. It is available to all members and to all instruments.

The flag can be set using the component <OrderAttributeGrp>. For details see 6.13.19 <OrderAttributeGrp>.

3.18.4 Trading Venue Transaction Identification Code (TVTIC)

The Trading Venue Transaction Identification Code (TVTIC) is an individual transaction identifier code for each transaction resulting from a full or partial execution.

The TVTIC will be delivered in the component < RegulatoryTradelDGrp> contained in User/ TradeCaptureReport (UAE/AE) for on-book and off-book trades via Back-office session.

For more information see 6.11 Application Messages: Trade Capture and 6.11.1 Trade Capture via Back-Office Session.

3.18.5 Direct Market Access (DMA) Identification

Order related requests (T7 Cash, T7 Derivatives) and TES Approve requests (T7 Cash) contain a flag that allows customers to identify their requests as Direct Market Access (DMA) transactions.

Trade notifications resulting of entries identified as Direct Market Access (DMA) transactions will include also the Direct Market Access (DMA) identifier.

Following field will be used for the Direct Market Access (DMA) identification: *OrderOrigination* (1724) = 5 (Direct market access)

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.19 Xetra/Eurex EnLight - Selective RFQ Platforms

The Xetra and Eurex EnLight platforms allow banks and brokers to selectively contact market makers with requests for quotes in order to find a trading counterparty. This allows the negotiation of off-book transactions electronically using the T7 infrastructure.

Xetra EnLight

After the negotiation with a particular counterparty or several ones, the resulting deal is directly sent to the clearing and settlement systems without any further interaction from the participants, hence providing straight-through-processing (STP) via the T7 system.

Eurex EnLight

The resulting deals are automatically transmitted to the Eurex T7 Entry Service (TES) for exchange trade confirmation and post-trade processing.

The message flows for the negotiation of Xetra/Eurex EnLight transactions are not supported via the FIX interface, but the trade confirmations related to Xetra/Eurex EnLight transactions will be delivered via FIX Back-office sessions. These will be *User/TradeCaptureReport (UAE/AE)* messages with *TrdType (828) = 1006 (Xetra/Eurex EnLight triggered trade)* and a link to the corresponding Xetra/Eurex EnLight deals in the field *NegotiationID (28758)* and in the component <SRQSRelatedTradeIDGrp>.

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

3.20 Continuous Auction Specialist Model (T7 Cash - T7 Boerse Frankfurt)

The trading model Continuous Auction with Specialist is used for instruments traded on T7 Boerse Frankfurt (Boerse Frankfurt and Boerse Frankfurt Zertifikate AG).

For each instrument traded in the Continuous Auction Specialist Model there is a Specialist responsible of maintaining the order book and triggering the price determinations.

The Specialist is able to enter, modify and delete orders on-behalf of other Business Units via other interfaces (not FIX), i.e. T7 GUI or Enhanced Trading Interface (ETI).

The Specialist can freeze and unfreeze the order book, which is required mainly for the price determination. Order requests sent by the customers in the freeze phase are queued by the system and processed when the order book is unfrozen. A specific handling is required for these scenarios, referred to as locked stock scenarios.

It is not intended to describe here all details about the functionality related to the trading model Continuous Auction with Specialist. Only some of the main features available via the FIX interface, which differ significantly from the functionality offered for the other T7 Cash markets, will be summarized in the next chapters.

3.20.1 Quote Request Solution (Private Quotes)

See chapter 3.12.2 Request for Private Quotes (T7 Cash - T7 Boerse Frankfurt)

3.20.2 Order Maintenance from Specialist on Behalf of other Bussiness Units

The Specialist is able to enter, modify and delete orders on-behalf of other Business Units via other interfaces (not FIX), i.e. T7 GUI or Enhanced Trading Interface (ETI).

The *ExecutionReport* (8) messages include the information about the entering firm and entering trader of the corresponding order transaction in the parties <entering firm> and <entering trader>. The content of these parties can be used for the identification of orders entered, modified or deleted by the Specialist on-behalf of other Business Units.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.20.3 Locked Stock Scenarios

In the Specialist model, order requests entered during the freeze phase (locked stock) are queued until the order book is unfrozen.

Requests received in this phase are confirmed preliminarily with a pending response. The final status of the request will depend on the actions performed by the specialist during the locked stock.

Examples:

- Enter request for new order is received during locked stock. When the order book is unfrozen, the order entry is executed.
- Modify request (e.g. Price change) for existing order is received during locked stock. If the order is fully filled in locked stock, the order modification will not be executed.

For requests entered in locked stock via a **FIX Trading Session**, there will be always a preliminary pending response and, after the order book is unlocked, a final response with the final result (accepted or rejected) of the processing of the pending request.

The information about the pending requests will be also sent via **FIX Back-office Sessions**. In this case, if the order reaches a final status (cancelled, filled), is triggered or is restated (e.g. due to a matcher failover) before the execution of some of the pending transactions, there will be no final message for each of the pending requests. The *ExecutionReport (8)* containing the information about the final order status (cancelled, filled) will implicitly finish (discard) the open pending transactions. In case of an order restatement, the *ExecutionReport (8)* will contain the information about the current status of the order, including the result of pending transacions executed successfully, but for which no final message has been generated.

All *ExecutionReport (8)* and *OrderCancelReject (9)* messages related to the status after locked stock will contain the component <OrderEventGrp>, which will include the information about the final status in the field *OrderEventType (1796)*.

Locked Stock Scenarios - Identification Criteria

Following table summarizes the identification criteria for the different locked stock scenarios:

Scenario	Identification Criteria	Trading Session	Back- office Session
Submission of an order in locked stock	ExecutionReport (8)	✓	✓
	OrdStatus (39) = A (Pending New)		
	ExecType (150) = A (Pending New)		
	ExecRestatementReason (378) = 138 (Pending New)		
Final confirmation of an order entered in locked stock	ExecutionReport (8)	\checkmark	✓
iocked Stock	OrdStatus (39) = 0 (New)		
	ExecType (150) = 0 (New)		
	ExecRestatementReason (378) = 141 (Pending New Applied)		
	OrderEventType (1796) = 101 (Status after locked stock - Pending request executed)		
Modification of an order in locked stock	ExecutionReport (8)	✓	✓
	OrdStatus (39) = E (Pending Replace)		
	ExecType (150) = E (Pending Replace)		
	ExecRestatementReason (378) = 139 (Pending Replace)		
Final confirmation of an order modifica-	ExecutionReport (8)	✓	✓
tion in locked stock	OrdStatus (39) = 0 (New), 1 (Partially filled) or 2 (Filled)		
	ExecType (150) = 5 (Replaced)		
	ExecRestatementReason (378) = 142 (Pending Replace Applied)		
	OrderEventType (1796) = 101 (Status after locked stock - Pending request executed)		
Final rejection of an order modification in locked stock	OrderCancelReject (9)	✓	
III IOOVAA 2100V	OrdStatus (39) = 8 (Rejected)		
	OrderEventType (1796) = 102 (Status after locked stock - Pending request rejected)

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.21 Issuer State Change Request (T7 Cash)

The issuer state change request allows the issuer of an instrument to send knockout and soldout requests directly into the Trading System using the FIX request message *SecurityStatusDefinitionRequest* (U27).

The result of the processing of an issuer state change request will be reported to the issuer via the response message *SecurityStatus* (f).

3.22 Strategy Creation (T7 Derivatives)

The creation of a strategy will be supported only for T7 Derivatives.

The SecurityDefinitionRequest (c) message can be used to request the creation of a specified complex instrument on Eurex.

The product identifier (*Symbol (55)*), and the signature < InstrmtLegGrp>, which provides the description of the legs, their ratios and side, are mandatory attributes of the request.

The (SecuritySubType (762)) tag must be present in case of a futures spread, option combination or strategy definition.

Only after a specific complex instrument has been requested and created, is it possible to enter orders for this instrument. The successful creation of a complex instrument, or the rejection, is confirmed by the *SecurityDefinition (d)* message. When a new strategy is requested, the instrument identifier (*SecurityID* (48)) and the signature of the complex instrument are returned.

Complex instrument definitions created by users are always temporary and are deleted during end of day processing if their order book is empty.

Note: The signature which is returned by the T7 may differ from the signature which was sent in the SecurityDefinitionRequest (c), e.g. in order to match a pre-defined strategy template.

3.23 Variance Futures (T7 Derivatives)

Participants enter, modify and delete orders in variance futures using the same messages and fields as for other simple instruments in T7 trading system (New Order Single, Order Cancel/Replace Request, Order Cancel Request). The only difference for variance futures is that the entered *Price (44)* is understood as Volatility and the entered quantity (*OrderQty (38)*) is understood as Vega Notional.

An Execution Report is published as usual.

Once traded, T7 provides a preliminary Trade Capture Report (*TradeReportType (856) is 1 = Alleged*) that includes also a preliminary calculated clearing price (*ClearingTradePrice (1596)*) and calculated clearing quantity (*ClearingTradeQty (28736)*).

Once the final conversion parameters are approved at the end of the trading day, a final Trade Capture Report (TradeReportType (856) 5 = No/Was (Replaced)) is published that provides the final calculated clearing price and clearing quantity.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

3.24 Total Return Futures (T7 Derivatives)

Participants enter, modify and delete orders in total return futures using the same messages and fields as for other simple instruments in T7 trading system (New Order Single, Order Cancel/Replace Request, Order Cancel Request).

An Execution Report is published as usual.

Once traded, T7 provides a preliminary Trade Capture Report (*TradeReportType (856) is 1 = Alleged*) that includes also a preliminary calculated clearing price (*ClearingTradePrice (1596)*) and calculated clearing quantity (*ClearingTradeQty (28736)*).

At the end of the trading day a final Trade Capture Report (TradeReportType (856) 5 = No/Was (Replaced)) is published that provides the final calculated clearing price and clearing quantity.

3.25 Decaying Futures (T7 Derivatives)

With the Decaying Futures functionality, a trade in one futures product is automatically converted into equivalent trades in a related product.

Trades on Decaying products executed on year, season or quarter basis are split into subsequent months.

On-exchange decaying trades are reported in T7 only on the decaying instrument basis.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

4 Connectivity and Session Parameters

4.1 Session Identification and Authentication

4.1.1 Session Identification and Logon Parameters

For each FIX session, a unique identifier, the *SenderCompID* (49) and a *Password* (554) is assigned by T7 on registration. A participant may have multiple FIX sessions (connections to the FIX Gateway). For each business unit and market type (Derivatives and Cash) a separate FIX session is required.

For security reasons a *Password (554)* must be specified on the *Logon (A)* message. The initial password assigned by T7 for each FIX session should be changed during the first logon by specifying *New-Password (925)* in the *Logon (A)* message.

When changing the password, the following password validation rules have to be applied:

- Minimum password length 8
- Minimum required alphanumeric characters 1
- Minimum required uppercase characters 1
- Minimum required lowercase characters 1
- Miminum required special (not alphanumeric) characters 1

In exceptional circumstances, a password may need to be reset. Participants are able to perform a password reset via the Member Section.

All messages sent to the FIX Gateway should contain the assigned unique identifier of the FIX session in the field *SenderCompID* (49) and market type identification in the *TargetCompID* (56) field:

- FIX Sessions for T7 Derivatives: TargetCompID (56) = "EUREX"
- FIX Sessions for T7 Cash (all XMICs except T7 Boerse Frankfurt): TargetCompID (56) = "XETRA"
- FIX Sessions for T7 Boerse Frankfurt: TargetCompID (56) = "XFRA"

All messages sent by the FIX Gateway to the client will contain the market type identification ("EUREX" / "XETRA" / "XFRA") in the *SenderCompID* (49) field and the assigned unique identifier of the FIX session in the *TargetCompID* (56) field.

The FIX Gateway has a two-step logon procedure, with a *Logon (A)* message (Session Logon) followed by one or multiple *User Request (UBE/BE)* messages (Trader Logons) at an application level.

4.1.2 Network Authentication

The FIX Gateway will validate the subnet from where the FIX session is initiated during session logon. The FIX session logon (*Logon (A)* message) will be rejected by the FIX Gateway if the subnet cannot be authenticated. Participants are allowed to initiate/resume their FIX sessions from alternate locations, e.g., a backup site or disaster recovery location, T7 permits the setup of up to four IP subnet addresses for FIX session IDs via the Member Section.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

4.1.3 Session Logon

The Logon (A) message authenticates a FIX session and establishes a connection to the FIX Gateway. This message must be the first one sent by the client. The FIX Gateway will validate the SenderCompID (49) and Password (554). A successful logon will initiate a FIX session.

The T7 FIX Gateway does not support encryption. *EncryptMethod (98)* must therefore be set to "0" (None/other).

As an additional safeguard measure, the *TestMessageIndicator* (464) is used to indicate whether a FIX session to be initiated will be used for Simulation or Production purposes. The FIX Gateway will reject a *Logon* (A) message in the event that the *TestMessageIndicator* (464) value does not match the target environment.

In order to enhance operational support and error analysis on both the session and application level, information about the client's FIX engine (FIXEngineName (1600), FIXEngineVersion (1601), FIXEngineVerdor (1602) as well as the used FIX application (ApplicationSystemName (1603), ApplicationSystemVersion (1604), ApplicationSystemVendor (1605)) must be provided by the client in the Logon (A) message. For more details, please refer to the detailed description of the Logon (A) message in **chapter 6.4.1 Session Logon**.

Note: The Logon (A) message is not used to log on and authenticate a trader on the T7 trading system.

4.1.4 Trader Logon

The *User Request (UBE/BE)* message identifies and authenticates a qualified trader establishing access to the T7 trading system. FIX sessions may be shared by several traders, with the exception of Back-office FIX sessions. Back-office FIX sessions do not require a trader logon.

Trading Session

The participant must provide the corresponding T7 User ID of the trader in the *Username (553)* field, and the corresponding password in the *Password (554)* field.

A successful trader logon will grant the trader access to the T7 trading system.

A trader logon requires an active connection to the T7 trading system (indicated by a *TradingSession-Status* (h) message with *TradSesEvent* (1368) = 203 (Message processing resumed) sent previously by the FIX Gateway). Order related messages will only be accepted by the trading system if a trader is logged on successfully. Otherwise these messages will be rejected (e.g. "User not logged in" in the message ExecutionReport (8)) and have to be sent again by the customer using a new MsgSeqNum (34) and a new ClOrdID (11). It is strongly recommended that order related messages should only be sent if a previous trader logon was positively confirmed.

Back-office Session

Back-office FIX sessions do not require a trader logon. For the reception of data an active connection to the T7 trading system (indicated by a *TradingSessionStatus* (h) message with *TradSesEvent* (1368) = 203 (Message processing resumed) sent previously by the FIX Gateway) is required.

T7 FIX Gateway	6 August 2021	
T7 FIX Gateway Manual (FIX 4.4)	V10.0	

4.1.5 IP Addresses and Ports

The FIX connection between a member's infrastructure and the T7 FIX Gateway service is established via a TCP/IP connection. The service comprises of primary and secondary gateways, operated in the T7 Simulation and Production environments. The respective gateways will use distinct target IP addresses and port numbers.

For each FIX session, two individual IP addresses and port numbers are assigned and communicated by T7. Primary IP address and port is for default usage. Secondary combination is reserved for emergency cases (e.g. line outage).

The participant is free to define its own source addresses as long as they match one of the IP subnet addresses entered during the registration of the FIX session (see **chapter 4.1.2 Network Authentication**).

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

4.2 Failover

The T7 FIX Gateway service features a redundant setup of all components to provide a high level of availability and fault tolerance, and to facilitate a client's implementation of failover in network- and application level failure scenarios. Its setup offers connectivity to both FIX Gateways and thus provides a client's application with the possibility to select which FIX Gateway it will connect to.

A FIX session may be initiated via all available connections, but every session may only be instantiated once. Each TCP/IP connection may only support one session instance.

Both participant ports on the primary and on the secondary FIX Gateway are open. Every FIX session may only be logged in once via one of the connections. Per default only the primary FIX Gateway is connected to the market back end. Therefore the first FIX session logon to the secondary FIX Gateway may take some seconds.

In case of a customer failover the T7 ETI session will be disconnected and non-persistent orders will be deleted.

4.2.1 Network Failover

The minimal network configuration that enables a network failover comprises two connections via dedicated leased line and/or via the Internet. Each line is unchangeably assigned to one FIX Gateway, one to the primary, the other to the backup gateway.

After a successful FIX logon to the secondary FIX Gateway, the port of the primary FIX Gateway connection will remain open, but any further logon attempts to the primary FIX Gateway connection will lead to a disconnect of this session.

4.2.2 Application Failover

In the event of a FIX Gateway failure, active FIX sessions connected to this gateway will be disconnected and the corresponding port will be closed. There will be no automatic FIX session failure in case of a FIX Gateway failure.

4.2.3 Best Practice

In all failover scenarios described above, participants may resume a FIX session for the same *Sender-CompID (49)* via connection to the secondary FIX Gateway. Participants should therefore implement a failover mechanism in their application, in order to be able to establish a FIX session over the alternative connection.

If a connection or a session logon fails or is not responded to immediately, a second attempt should only be made after a few seconds (30 seconds recommended).

<u>Note:</u> A failover will not cause a reset of sequence numbers on the FIX Gateway side, neither is a reset of sequence numbers required in the participant's application. After re-establishment of the FIX session via the alternative connection, the regular retransmission process of missed messages starts.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

4.3 Message Throttling and Queuing

All messages will be processed by the FIX engine on the exchange side. Nevertheless participants should not send more than 50 application messages (production environment) per second, trading market and FIX session in order to prevent the T7 FIX Gateway from queuing. In case of exceeding a rate of 50 messages per second, the FIX Gateway may queue the affected messages internally and forward them subsequently to the back end, maintaining the maximum back end throttle rate.

The general session parameter MaxOrderRequestQueueTimeout allows a client to define the maximum time period in milliseconds a single FIX message should be held in the FIX Gateway's intermediate buffer in case the throttle limit is exceeded, before it is rejected.

Default is a maximum value, which means that all requests will be queued until they can be routed to the trading system.

Session parameters can be maintained within the Member Section.

4.4 Mass Cancellation on Disconnect

The FIX Gateway does not cancel orders in the event of a FIX session disconnection.

Please note: in case of a customer failover the T7 ETI session will be disconnected and non-persistent orders will be deleted. For more details, please refer to **chapter 4.2 Failover**.

4.5 Backward Compatibility

Backward compatibility on the T7 FIX Gateway is feasible if all of the following applies to a legacy client connecting to a T7 FIX Gateway with a newer version:

- existing request-messages did not change or the changes affect only optional fields
- the FIX Engine on the customer side is capable of dropping/logging unknown new messages, unknown new fields and unknown new valid values on both session and application levels
- new functionality is not used by customers

Under this definition, the FIX interface for T7 Release 10.0 is backward compatible with the FIX interface for T7 9.1 for FIX Trading sessions of the version FIX 4.4.

FIX Backoffice sessions are not offered anymore. For the FIX Trading sessions, only the version FIX 4.4 is supported.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

5 Session Layer

The T7 FIX Gateway uses session level messages as specified by the FIX 4.4 Specification with T7 specific extensions as described in this document.

Details regarding the layouts of the administrative messages can be found in **chapter 6.4 Administrative Messages**.

5.1 Logon

The *Logon (A)* message is the first message the participant needs to send after the TCP connection has been established. No encryption is supported by the FIX Gateway.

As the first message for the day the participant should send a Logon (A) message with sequence number 1

A FIX session is identified by the field SenderCompID (49) and TargetCompID (56) in the message header.

SenderCompID (49), Password (554) and BeginString (8) are validated during the session logon. If validation fails, the FIX Gateway will send a Logout (5) message specifying the reason for the rejection followed by the termination of the TCP connection.

Note: If validation during session logon has failed, the sequence number will not be reset.

In the event of an intra-day restart the *Logon (A)* response message may provide a sequence number higher than expected by the participant. This would indicate that messages were missed. The participant should send a *ResendRequest (2)* message to trigger retransmission of the missed messages (please refer to **chapter 5.5 Resend Request** for more details).

Logon requests with *ResetSeqNumFlag (141)* set to "Y" will trigger a reset of sequence numbers at the participant side only. The FIX Gateway's sequence numbering will remain unchanged. Thus the customer is able to access all messages disseminated by the FIX Gateway including the transmission of all active orders at start of the business day.

Note: If a FIX session is successfully logged on subsequent Logon (A) messages will be discarded.

5.2 Sequence Number

All FIX messages are identified by a unique sequence number. The FIX Gateway will process messages in sequence per tradeable instrument.

Sequence numbers are reset by the FIX Gateway during down time after the end of each trading day. The same behaviour is expected for the FIX engine on the client side.

Sequence numbers sent by the client which are behind sequence expected will trigger a logout and TCP connection drop by the FIX Gateway.

Sequence numbers ahead of sequence will trigger a message recovery by the FIX Gateway via the ResendRequest (2) message.

5.3 Heartbeat

The HeartBtInt (108) has to be specified by the participant during the FIX session logon.

A *Heartbeat (0)* message should be sent by the participant if no other message has been processed during the defined *HeartBtInt (108)* interval.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

5.4 Test Request

A *TestRequest (1)* message should be sent if no in-sequence message has been received for more than the heartbeat interval. If no in-sequence message is received after that for more than the heartbeat interval, the TCP connection should be dropped.

5.5 Resend Request

A ResendRequest (2) message initiates the retransmission of missed messages and can be used if a sequence number gap has been detected. A Resend Request (2) message needs to be processed even if it is ahead of sequence.

The *PossDupFlag (43)* field set to "Y" in the Message Header of a FIX message indicates that a FIX engine is repeating transmission of already sent content (including *MsgSeqNum (34)*). In this case a new value is set in the field *SendingTime (52)* and the sending time of the original message is delivered in field *OrigSendingTime (122)*.

The T7 FIX Gateway supports open or closed sequence range in a *Resend Request (2)* message (an open range is indicated by sequence number zero as the *EndSegNo (16)*).

<u>Note:</u> No Gap Fill messages should be sent by the participant during the resend series for application messages. Application messages should always be re-transmitted since the T7 FIX Gateway requires all missed application messages for the purpose of reconciliation with the T7 trading system.

5.6 Reject

Session level rejects are used by the T7 FIX Gateway to indicate violations of the session protocol, missing fields or invalid values.

5.7 Sequence Reset

Two types of SequenceReset (4) messages are supported: Gap Fill mode and Reset mode.

5.7.1 Gap Fill Mode

This type of SequenceReset (4) message is the response to a ResendRequest (2) message.

Gap Fill mode is indicated by GapFillFlag (123) field = "Y".

All gap fill messages should have PossDupFlag (43) = "Y" in the Message Header.

Note: Gap Fill mode should only be used by the participant for administrative messages (see **chapter 5.5 Resend Request**).

5.7.2 Reset Mode

The Reset Mode of the *SequenceReset (4)* message may be used by the participant in emergency scenarios where all means of automatic recovery are lost (e.g. in case of an unrecoverable application failure).

Reset Mode is indicated if GapFillFlag (123) = "N" or if the field is omitted.

After the Reset Mode has been triggered, the *TestRequest (1)* message should be used by the participant to verify that the requested reset has been accepted by the FIX Gateway.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

5.8 Logout

The *Logout (5)* message is used by the participant to gracefully close the FIX session. Messages need to be processed normally by the participant until the FIX Gateway sends the logout confirmation.

The T7 FIX Gateway will send a *TradingSessionStatus* (h) message when all messages for a FIX session have been processed. The FIX Gateway will subsequently log out the FIX session.

Note: The FIX Gateway will also send a *Logout (5)* message if validation fails for a FIX session logon. The reason for the rejection is specified in *SessionStatus (1409)*. The *Logout (5)* message is followed by a drop of the TCP connection.

5.9 Possible Resend

5.9.1 Messages from Client

The FIX Gateway has no specific functionality for FIX messages from client with PossResend (97) = "Y". Order requests with PossResend (97) = "Y":

- Requests will be rejected if the ClOrdID (11) contained in the message has been processed before.
- Requests will be processed if the ClOrdID (11) in the request message has not been processed before.

Other requests with *PossResend (97) = "Y"*:

• No special processing, FIX requests will be processed as usual, independently of the value of the field *PossResend (97)*.

5.9.2 Messages to Client

The FIX Gateway will set *PossResend* (97) = "Y" to indicate that a message sent to the client may contain information that has been sent under another sequence number.

If the customer receives a message from FIX Gateway containing PossResend (97) = "Y", the customer must check if the information contained in the message has been received in a previous message and has been already processed. If this is the case the customer should discard the message to avoid the processing of duplicate data.

This is especially relevant for messages containing trading information (order and trade messages). For these messages the FIX Gateway will deliver fields that can be used for the identification of duplicate messages without checking the whole content of the FIX messages.

Relevant messages and fields to be used for the identification of duplicate messages:

Message content	FIX Message	FIX field with unique identifier	Deriv- atives	
Order information	ExecutionReport (8)	ExecID (17)	\checkmark	✓
Trade notifications via FIX Back-office sessions	User/TradeCaptureReport (UAE/AE)	TradeReportID (571)	✓	✓

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

5.10 Recovery

When a participant reconnects after a FIX session disconnection during the same business day, two different scenarios can be identified as a reason for the outage: namely outage on the client side and outage on T7 FIX Gateway side.

5.10.1 Outage on the Client Side

- After resuming the FIX session, the participant may have missed some messages from the FIX Gateway. In this case, the sequence number of the next message received from the FIX Gateway will be ahead of the last MsgSeqNum (34) stored on the participant side.
- The participant should send a *ResendRequest (2)* message in order to trigger all missed messages during the outage.
- The FIX Gateway will return all potentially missed messages with *PossDupFlag (43) = "Y"* to indicate that a message may have been previously transmitted with the same *MsgSeqNum (34)*.

<u>Note:</u> Mass cancellation service on disconnect is not supported by the T7 FIX Gateway. All open orders remain in the order book during an outage including non-persistent orders.

5.10.2 Outage on T7 FIX Gateway Side

In the unlikely event that the disconnection was due to an outage on the T7 side, the participant should consider the following recovery mechanisms:

- After reconnection of the FIX session, the FIX Gateway may receive a sequence number higher than the one expected and sends a *ResendRequest (2)* message to the participant.
- The participant should resend all potentially missed messages with *PossDupFlag (43) = "Y"*, to indicate that a message may have been previously transmitted with the same *MsgSeqNum (34)*. The FIX Gateway will send responses to already processed messages with *PossResend (97) = "Y"*. After a forced failover pending order messages might be rejected. These messages can be submitted again by the participant using a new *MsgSeqNum (34)* and a new *ClOrdID (11)*.

<u>Note:</u> No Gap Fill messages should be sent by the participant during the resend series for application messages. Application messages should always be re-transmitted since the T7 FIX Gateway requires all missed application messages for the purpose of reconciliation with the T7 trading system.

If a participant sends Gap Fill messages during the resend series for application messages the related orders might not be accessible any more via the FIX Gateway and related order specific information will not be forwarded to the FIX session. This also holds true in case of *Logon (A)* message with *ResetSeqNumFlag (141) = "Y"*.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6 Message Formats

This chapter provides an overview of supported message types and details on the administrative, technical and application messages used by the T7 FIX interface.

The structure of the header and trailer as well as details on the components used in application messages are provided.

6.1 Overview of supported Message Types

6.1.1 Administrative Messages

Message	Туре	Deriv- atives	Cash	Description
Heartbeat	0	√	✓	The Heartbeat message may be used by the client and the FIX Gateway to monitor the status of the communication link during periods of inactivity.
Test Request	1	√	✓	The Test Request message is used to trigger a heartbeat message from the opposing application.
Resend Request	2	√	✓	The Resend Request is used by the client and the FIX Gateway to initiate the retransmission of messages in a recovery scenario.
Reject	3	√	√	The Reject message is used by the FIX Gateway when a message is received but cannot be properly processed due to a session-level rule violation.
Sequence Reset	4	✓	✓	The Sequence Reset message has two modes: Gap Fill mode is used in response to a Resend Request when one or more messages must be skipped over. Reset mode specifies an ar- bitrarily higher new sequence number after an unrecoverable application failure.
Logout	5	✓	√	The Logout message initiates or confirms the termination of a FIX session. It is also used by the FIX Gateway to reject the FIX session logon.
Logon	А	√	✓	The Logon message allows the client to connect to the FIX Gateway. It is also used by the FIX Gateway to confirm the logon.
Business Messages Reject	j	√	✓	The Business Message Reject message indicates that an application message has been rejected.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.1.2 Application Messages: Order Management

Message	Туре	Deriv- atives	Cash	Description
New Order Single	D	√	✓	The New Order Single message is used by the client to submit an order for single leg securities.
User New Order Multileg	UAB	✓		The User New Order Multileg message is provided to submit orders for securities that are made up of multiple securities, known as "legs". Only for FIX 4.2.
New Order Multileg	АВ	✓		The New Order Multileg message is provided to submit orders for securities that are made up of multiple securities, known as "legs". Only for FIX 4.4.
Order Cancel Request	F	✓	✓	The Order Cancel Request is used to delete an existing order.
Order Cancel/Replace Request	G	✓	✓	The Order Cancel/Replace Request is used to modify an existing order.
User Multileg Order Cancel/Replace Request	UAC	√		The User Multileg Order Cancel/Replace request is used to modify a multileg order (previously submitted using the User New Order Multileg message). Only for FIX 4.2.
Multileg Order Cancel/Replace Request	AC	√		The Multileg Order Cancel/Replace request is used to modify a multileg order (previously submitted using the New Order Multileg message). Only for FIX 4.4.
Execution Report	8	✓	✓	The Execution Report message is used to: - confirm the receipt of an order - confirm changes to an existing order - transmit all active orders - relay fill information - reject orders
Order Cancel Reject	9	√	✓	The Order Cancel Reject message indicates that an Order Cancel Request, Order Cancel/Replace Request or Multileg Order Cancel/Replace Request has been rejected.
Ueer Order Mass Action Request	UCA	✓	✓	User Order Mass Action Request is used for deletion of multiple orders.
User Order Mass Action Response	UCAR	√	✓	User Order Mass Action Response is used as a response to a UserOrderMassActionRequest (UCA).
User Order Mass Action Report	UBZ	✓	✓	This message informs about unsolicited mass cancellation events.

T7 FIX Gateway	6 August 2021		
T7 FIX Gateway Manual (FIX 4.4)	V10.0		

6.1.3 Application Messages: Security Status Definition Request

Message	Туре	Deriv- atives	Cash	Description
Security Status Definition Request	U27		✓	The Security Status Definition Request is used to send knockout and soldout requests (T7 Boerse Frankfurt)
Security Status	f		✓	The Security Status is used as the application level response to a Security Status Definition Request (T7 Boerse Frankfurt)

6.1.4 Application Messages: Strategy Creation

Message	Туре	Deriv- atives	Cash	Description
Security Definition Request	С	✓		The Security Definition Request message is used to create a strategy on Eurex.
Security Definition	d	√		The Security Definition message is used to accept or reject the security defined in a Security Definition message.

6.1.5 Application Messages: Party Risk Limits

Message	Туре	Deriv- atives	Cash	Description
User Party Risk Limits Request	UCL	✓		The UserPartyRiskLimitsRequest (UCL) is used to inquire pre-trade risk limits. These limits can be defined for on-book or off-book trading on product, exchange and user risk group level.
User Party Risk Limits Report	UCM	√		The User Party Risk Limits Report message is used as the application level response to a User Party Risk Limits Request.

6.1.6 Application Messages: Cross Request

Message	Туре	Deriv- atives	Cash	Description
Cross Request	UDS	✓	✓	Cross Request is used for the publication of Cross Trade Announcements and, for T7 Derivatives, also for the Client Liquidity Improvement Process (CLIP).
Cross Request Acknowledgement	UDT	√	✓	Cross Request Acknowledgement is used as the application level response to a Cross Request.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.1.7 Application Messages: Quote Request Functionality

Message	Туре	Deriv- atives	Cash	Description
Quote Request	R	√	✓	The Quote Request message is used to request public quotes from market makers (T7 Cash, T7 Derivatives) and private quotes from specialists (T7 Cash). This message is commonly referred to as a Request For Quote (RFQ).
Mass/Quote Acknowledgement	b	✓	✓	Mass/Quote Acknowledgement is used as the application level response to a Quote Request for a public quote. The message is also used to send pending responses for Quote Requests for public and private quotes.
Quote	S		✓	The Quote message is used as the response to a Quote Request for a private quote.
User Quote Request Reject	UAG	√	√	The User Quote Request Reject message is used to reject a Quote Request. Only for FIX 4.2.
Quote Request Reject	AG	✓	✓	The Quote Request Reject message is used to reject a Quote Request. Only for FIX 4.4.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.1.8 Application Messages: Trade Capture

Message	Туре	Deriv- atives	Cash	Description
User Trade Capture Report	UAE	✓	✓	The User Trade Capture Report message is used to report trades and trade reversals via FIX Back-office sessions. Additionally, for T7 Cash the message is also used for the TES (T7 Entry Service) message flows (TES requests and broadcasts). Only for FIX 4.2.
Trade Capture Report	AE	✓	✓	The Trade Capture Report message is used to report trades and trade reversals via FIX Backoffice sessions. Additionally, for T7 Cash the message is also used for the TES (T7 Entry Service) message flows (TES requests and broadcasts). Only for FIX 4.4.
User Trade Capture Report Ack	UAR		✓	The User Trade Capture Report Ack message is used as a response to a User Trade Capture Report (UAE) sent by the customer for a TES trade. Only for FIX 4.2.
Trade Capture Report Ack	AR		✓	The Trade Capture Report Ack message is used as a response to a Trade Capture Report (AE) sent by the customer for a TES trade. Only for FIX 4.4.

6.1.9 Application Messages: Other

Message	Туре	Deriv- atives	Cash	Description
User User Request	UBE	√	√	Each trader needs to logon/logoff to/from T7 system via the User User Request message. Only for FIX 4.2.
User Request	BE	√	√	Each trader needs to logon/logoff to/from T7 system via the User Request message. Only for FIX 4.4.
User User Response	UBF	√	√	The User User Response message is used to confirm or reject the trader logon/logoff. Only for FIX 4.2.
User Response	BF	✓	✓	The User Response message is used to confirm or reject the trader logon/logoff. Only for FIX 4.4.
User Notification	UCB	✓	✓	The User Notification message is used to: - send information of an unsolicited trader logoff - send information of legal notifications
Trading Session Status	h	✓	✓	The Trading Session Status message informs about session related events.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

		ontinued .		
Message	Туре	Deriv- atives	Cash	Description
Session Details List	U6	✓	✓	The Session Details List message provides a list of ETI sessions of the own business unit. This message will be sent after the establishment of the connection to the T7 trading system.
User Party Risk Limits Update Report	UCR	✓		User Party Risk Limits Update Report. This message communicates risk control events related to the Advanced Risk Protection functionality of T7 in case of a risk limit breach or release.
User Party Entitlements Update Report	UCZ	√	✓	User Party Entitlements Update Report. This message communicates risk control events related to the manual stop or release of trading functionality. Events will be generated on the Clearing back end and passed to the user by the T7 back end.
User Party Action Report	UDI	✓	✓	User Party Action Report. This message communicates risk control events of type halt-trading and re-instate. Events will be entered via the T7 Admin GUI.

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.2 Explanation of the Message Formats

The tables in the next chapters describe the formats of the different components and messages used in T7 FIX Gateway.

Column headers:

"R": will indicate the generic usage of tags and components with respect to the requirements of the T7 FIX interface.

"D": is the abbreviation for Derivatives. It will describe the usage of tags and components for Derivatives.

"C": is the abbreviation for Cash Market. It will describe the usage of tags and components for Cash.

Content:

The content of the columns "R", "D" and "C" will indicate if a tag or component is mandatory ("Y"), optional ("N"), conditionally mandatory ("C") or not used (shadowed cell) within the structure concerned.

"R" describes the generic usage in the T7 FIX interface and contains a summary of the content of "D" and "C". Example: " \mathbf{D} " = "Y" and " \mathbf{C} " = "N" -> " \mathbf{R} " = "N".

"**Description**" will contain specific description, format, valid values and further explanatory remarks of a FIX field. Valid values are included in a table. This table has the additional columns " \mathbf{D} " and " \mathbf{C} ". A checkmark (\checkmark) identifies that the valid value is used for the specific system (Derivatives (" \mathbf{D} ") or/and Cash Market (" \mathbf{C} ")).

The following FIX elements are denoted as follows:

- FIX messages: message name (Message Type)
- FIX fields: field name (FIX tag)
- FIX components: < component block name>
- FIX repeating groups: <repeating group name>
- Occurrences in FIX repeating groups: <repeating group occurrence name>

Field formats are described with the standard FIX notation (e.g. Int, String, Boolean, Price, etc.).

For some fields additional information is added to describe length and format restrictions related to the T7 FIX Gateway and the T7 Backend implementation. Those are not FIX data type definitions but more conventions of writing and valid only for this document.

For example:

- String (128) means that the tag's value will be a string with a maximum length of 128.
- Int (10) means that the tag's value may have up to 10 significant digits (after leading zeroes have been removed).
- Price (11.8) means that tag's value is a price with up to 11 significant digits before the decimal point and at most 8 decimal places.
- Qty (15.4) means that tag's value is a quantity with up to 15 significant digits before the decimal point and at most 4 decimal places.

6.5.6 Execution Report

The Execution Report message is used to confirm the receipt of an order, confirm changes to an existing order, transmit all active orders, relay fill information, reject orders.

If a field not supported for the market type (Derivatives, Cash) is entered in the FIX Request, the field will be sent back in the reject Execution Report. This means that reject Execution Reports can contain fields documented as not supported for the specific market type.

6.8 Application Messages: Cross Request

6.8.1 Cross Request

The Cross Request message is used for the publication of Cross Trade Announcements and, for T7 Derivatives, also for the Client Liquidity Improvement Process (CLIP).

A Cross Trade Announcement is used to announce a Cross Trade to the market if a trader intends to trade with himself via order book by sending a buy and a sell order for the same instrument. It is also used for prearranged trades between two traders, where the trade should be reproduced via matching the orders in the order book.

The Client Liquidity Improvement Process (CLIP) is used by brokers to execute a client order against another broker (bilateral) or against himself (unilateral), under the consideration of potential price advantages for client order in matches against the central order book.

For more details to the usage of the fields see chapter 6.8.1.1 Cross Request - Usage of the Fields.

6.11.2.4 TES Message Flows

This chapter contains the message flows and functional description for the TES functionality (TES trade entry, TES trade approval, TES modification, TES deletion, TES execution and TES trade broadcast).

An example will be given for a successfull TES trade including the information about the involved FIX messages and key fields. It is not intended to document all possible situations but more to give an example.

User Groups

A TES trade is always a bilateral trade, which means one buyer against one seller.

Two user groups are involved to a TES trade:

Initiator, the user who initiates the TES trade. The Initiator is able to enter, modify and delete a TES trade. A TES trade contains two trade sides. Each trade side contains one allocation for one Approver.

Approver, buyer and seller participating to the TES trade (Approver 1 / Approver 2).

TES Trade Entry

The TES workflow starts with the TES trade entry by the Initiator.

No.	Message	Initiator	FIX Gateway	Approver 1/ Approver 2
1	User/TradeCaptureReport (UAE/AE) (Request)	\Longrightarrow Trading		
	TradeReportType (856) = 0 (Submit) TradeReportID (571)	Session		
2	User/TradeCaptureReportAck (UAR/AR)		← Trading	
	TradeReportType (856) = 0 (Submit) TrdRptStatus (939) = 0 (Accepted) TradeReportID (571) TESExecID (30017)		Session	
3	User/TradeCaptureReport (UAE/AE) (Broadcast)		← Trading	
	TradeReportType (856) = 0 (Submit) TradeAllocStatus (1840) = 0 (Pending) MessageEventSource (1011) = 202 (TES Broadcast to Initiator - Approve Pending) TradeReportID (571) IndividualAllocID (467) [per allocation] PackageID (2489) TESExecID (30017)		Session	
4	User/TradeCaptureReport (UAE/AE) (Broadcast) → to Approver 1 and Approver 2		⇒ Trading Session	
	TradeReportType (856) = 11 (Alleged New) TradeAllocStatus (1840) = 0 (Pending) MessageEventSource (1011) = 205 (TES Broadcast to Approver - Approve Pending) TradeReportID (571) IndividualAllocID (467) PackageID (2489) TESExecID (30017)		CESSIOII	

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

TES Trade Approval

Using the TES Approve request, the Approver completes his own clearing information and approves its TES trade side. Once a side is approved the status of that side is set to approved (TradeAllocStatus (1840) = 2 (Approved) with MessageEventSource (1011) = 205 (TES Broadcast to Initiator - Approve Pending)).

The approval can be done independently by each Approver. There is no check on the sequence of approval.

No.	Message	Initiator	FIX Gateway	Approver 1/ Approver 2
5	User/TradeCaptureReport (UAE/AE) (Request) → from Approver 1 and Approver 2			← Trading Session
	TradeReportType (856) = 2 (Accept) TradeReportID (571) IndividualAllocID (467) PackageID (2489) TESExecID (30017)			Session
6	6 User/TradeCaptureAck (UAR/AR) → to Approver 1 and Approver 2	⇒ Trading Session		
	TradeReportType (856) = 0 (Submit) TrdRptStatus (939) = 0 (Accepted) TradeReportID (571) TESExecID (30017)		Session	
7	User/TradeCaptureReport (UAE/AE) (Broadcast) → to Approver 1 and Approver 2		⇒ Trading Session	
	TradeReportType (856) = 2 (Accept) TradeAllocStatus (1840) = 2 (Approved) MessageEventSource (1011) = 206 (TES Broadcast to Approver - Approved) TradeReportID (571) IndividualAllocID (467) PackageID (2489) TESExecID (30017)		CESSIOII	

T7 FIX Gateway	6 August 2021

	continued			
No.	Message	Initiator	FIX Gateway	Approver 1/ Approver 2
8	User/TradeCaptureReport (UAE/AE) (Broadcast) → two messages will be sent to Initiator → first message: after Approver 1 approved TradeReportType (856) = 0 (Submit) TradeAllocStatus (1840) = 2 (Approved) MessageEventSource (1011) = 205 (TES Broadcast to Initiator - Approve Pending) TradeReportID (571) IndividualAllocID (467) PackageID (2489) TESExecID (30017) → second message: after Approver 2 approved TradeReportType (856) = 0 (Submit) TradeAllocStatus (1840) = 2 (Approved) MessageEventSource (1011) = 203 (TES Broadcast to Initiator - Approve Finished) TradeReportID (571) IndividualAllocID (467) PackageID (2489) TESExecID (30017)		Trading Session	

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

Execution and Trade Broadcast

When the last remaining side is approved by the corresponding Approver the status of the TES trade will change to executed and an Execution Broadcast with *MessageEventSource* (1011) = 207 (TES Broadcast to Approver - Executed) will be sent to each Approver.

After an Execution Broadcast a Trade Broadcast with *MessageEventSource* (1011) = 201 (TES Trade Notification) will be sent to each Approver.

No.	Message	Initiator	FIX Gateway	Approver 1/ Approver 2
9	User/TradeCaptureReport (UAE/AE) (Execution Broadcast) → to Approver 1 and Approver 2		⇒ Trading Session	
	TradeReportType (856) = 2 (Accept) MessageEventSource (1011) = 207 (TES Broadcast to Approver - Executed) IndividualAllocID (467) TradeReportID (571) PackageID (2489) TESExecID (30017)			
10	User/TradeCaptureReport (UAE/AE) (Trade Broadcast) → to Approver 1 and Approver 2		⇒ Back- office	
	TradeReportType (856) = 0 (Submit) MessageEventSource (1011) = 201 (TES Trade Notification) TradeReportID (571) TradeID (1003) SideTradeID (1506) PackageID (2489)		Session	

TES Trade Modification

The Initiator can modify the TES trade details as long as the trade status has not been changed to executed (MessageEventSource (1011) = 207 (TES Broadcast to Approver - Executed)).

All TES trade attributes including price, quantity and TES sides can be modified except the traded instrument and the related references.

Modification of any TES attributes is treated like a new TES trade entry. As a result the TES entry time as well as the side approval time is reset and the status of all sides is changed to pending (*TradeAllocStatus* (1840) = 0 (*Pending*)).

Each Approver is notified about the modification even if he has already approved his side. During TES trade modification all attributes are validated again as it is done for the TES trade entry. It is possible to remove existing Approvers and add new Approvers as part of TES trade modification.

TES Trade Deletion

A pending TES trade can only be deleted by the Initiator. As long as there is at least one pending side of a TES trade it is allowed to delete the TES trade.

6.13 Components

6.13.1 < Instrument>

The <Instrument> component block comprises all fields required for security identification. For messages operating on product level - like the Order Mass Action Request - only Symbol(55) will be necessary, whereas messages operating on instrument level will also need SecurityID(48) and SecurityIDSource(22).

Tag	Field Name	R	D	С	Description		
<instrui< td=""><td>ment></td><td></td><td></td><td></td><td></td></instrui<>	ment>						
55	Symbol	Y	Y	Y	String (10) Unique identifier for a T7 product. T7 Cash: If the ISIN is used as instrument identifier in the FIX request (SecurityIDSource (22) = "4" (ISIN)), the product identifier is allowed but not required. If no product identifier is provided Symbol (55) must contain "[N/A]".		
48	SecurityID	N	N	N	String (20) Instrument identifier. Required for order messages. Use "[N/A]" for SecurityDefinitionRequests (c). Field will not be set for messages operating on product level.		
22	SecurityIDSource	N	N	N	String (1) Identifies class or source of the SecurityID (48) value. Required if SecurityID (48) is specified.		
					Value Description D C		
					4 ISIN ✓		
					M Marketplace-assigned \checkmark \checkmark identifier

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.13.7 < Parties>

The <Parties> component block comprises all parties participating in a transaction.

Trade messages:

For User/TradeCaptureReport (UAE/AE) messages the same structure will be used for both FIX version, FIX 4.2 and FIX 4.4.

Some of the parties will be delivered as occurrences of the parties repeating group, for other parties separate fields will be defined. Details are documented in **chapter 6.13.7.3 Trade Capture Report: Party Information**.

Cross Request:

For *CrossRequest (UDS)* messages the same structure will be used for both FIX versions, FIX 4.2 and FIX 4.4. The parties will be delivered as occurrences of the parties repeating group. Details are documented in **chapter 6.13.7.4 Cross Request: Party Information**.

Security Status Definition Request:

For SecurityStatusDefinitionRequest (U27) messages the same structure will be used for both FIX versions, FIX 4.2 and FIX 4.4.

The parties will be delivered as occurrences of the parties repeating group.

User Party Risk Limits Request:

For UserPartyRiskLimitsRequest (UCL) messages the same structure will be used for both FIX versions, FIX 4.2 and FIX 4.4.

The parties will be delivered as occurrences of the parties repeating group.

Order management and other application messages:

For each party a separate occurrence of the repeating group will be set up for FIX 4.4.

For FIX 4.2 a separate field will be defined for each party.

Details are documented in chapter 6.13.7.2 Order Management and Other Messages: Party Information.

6.13.7.1 Party Component Block

The following structure of the party component block is used for FIX 4.2 and 4.4 in the messages *User/TradeCaptureReport* (*UAE/AE*), *CrossRequest* (*UDS*), *UserPartyRiskLimitsRequest* (*UCL*) and *SecurityStatusDefinitionRequest* (*U27*). For other messages the structure is used only for FIX 4.4.

6.13.7.2 Order Management and Other Messages: Party Information

For each party a separate occurrence of the repeating group will be set up for FIX 4.4.

In FIX 4.2 a separate field will be defined for each party.

In FIX 4.4 the party identifier is delivered in the field *PartyRole (452)*, the corresponding Party in the field *PartyID (448)*.

Note: In FIX 4.4 the parties <execution identifier> and <investment identifier> require the field *PartyRoleQualifier* (2376) as additional identification criterion. Only for these parties it is possible to use the PartyRoleQualifier (2376) without setting a particular PartyID (448) (set PartyID (448) = "[N/A]").

Party	Tag and Field for FIX 4.2	PartyRole (452) for FIX 4.4	PartyIDSource (447) for FIX 4.4

6.13.17 < DisplayInstruction>

Display instruction is used for Iceberg Order and Volume Discovery Order.

Tag	Field Name	R	D	С	Description	on			
<disp< td=""><td>layInstruction></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></disp<>	layInstruction>								
1138	DisplayQty	N		Y	Qty (15.4) This field provides the display quantity. For iceberg order entry or modify with DisplayMethod (1084) = "1" (Initial) it specifies the quantity that should be visible to the market (peak). For requests with DisplayMethod (1084) = "3" (Random) the field specifies the initial quantity visible to the market (initial peak). On Execution Reports it contains the currently displayed quantity (remaining peak). If the remaining unexecuted quantity is smaller than the display quantity the remaining unexecuted quantity will be displayed.				
1084	DisplayMethod	N		Y	Char Defines if the value of the peak quantity at will be determined absolutely (using the in the DisplayQty (1138)) or randomly (using value between DisplayLowQty (1085) and Qty (1086)).		tial va a ranc	lue of dom	f

6.14 Error Codes

6.14.1 Rejections - FIX Messages and Error Information

Rejections on session level (e.g. usage of undefined tags, mandatory tags missing) are sent via *Reject (3)* and *BusinessMessageReject (j)* messages. The reject reason is delivered in different fields:

Message	Reject reason	Possible values
Reject (3)	SessionRejectReason (373)	see chapter 6.4.7.1 Session- RejectReason (373): List of Valid Values
BusinessMessageReject (j)	BusinessRejectReason (380)	see chapter 6.4.6 Business Message Reject

Rejections on application level may be generated by the T7 FIX Gateway or by the T7 Backend. The information about the component that caused the rejection is delivered in the field *ReturnCodeSource* (25024). Following values are possible: 'FIX GATEWAY', 'TRADING SYSTEM'.

The error information is delivered in different fields, depending on the FIX message:

Message	Error code	Error text
ExecutionReport (8)	ReturnCode (25023)	ReturnCodeText (25025)
OrderCancelReject (9)	ReturnCode (25023)	ReturnCodeText (25025)
UserOrderMassActionResponse (UCAR)	ReturnCode (25023)	ReturnCodeText (25025)
CrossRequestAck (UDT)	ReturnCode (25023)	ReturnCodeText (25025)
User/QuoteRequestReject (UAG/AG)	QuoteRequestRejectReason (658)	Text (58)
BusinessMessageReject (j)	ReturnCode (25023)	Text (58)
Reject (3)	ReturnCode (25023)	Text (58)
SecurityDefinition (d)	SecurityRejectReason (1607)	Text (58)
User/TradeCaptureReportAck (UAR/AR)	TradeReportRejectReason (751)	RejectText (1328)
SecurityStatus (f)	ReturnCode (25023)	ReturnCodeText (25025)
UserPartyRiskLimitsReport (UCM)	ReturnCode (25023)	RejectText (1328)
UserResponse (UBF/BF)	ReturnCode (25023)	UserStatusText (927)

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.14.2 Error Codes - Usage and special handling of some backend codes

In case of rejections, the error codes generated by the T7 FIX Gateway (i.e. with *ReturnCodeSource (25024) = 'FIX GATEWAY'*) are used always for one specific reject reason.

But the T7 Backend uses some error codes to describe different rejections. In these cases a distinction of the different reject reasons is only possible checking the information contained in the error text.

Following error codes from T7 Backend are used in a generic way for different reject reasons:

Value	Description	Deriv- atives	Cash
99	Other	✓	✓
210	Validation Error	✓	✓

For following error codes from T7 Backend there is special handling in T7 FIX Gateway:

Value	Description	Deriv- atives	Cash
105	Error converting response or broadcast	\checkmark	✓
200	Internal technical error	✓	\checkmark

These error codes do not necessarily mean that the request has been rejected. The status of the request is unknown. If one of these codes is received from T7 Backend, the FIX Gateway generates a "Request Status Unknown" response (see details in **chapter 3.8 Pending Responses "Request Status Unknown"**)

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.14.3 Error Codes from T7 FIX Gateway

The following table documents all error codes set by the FIX Gateway (i.e. with ReturnCodeSource (25024) = 'FIX GATEWAY'), not only in case of rejections, but also for pending responses:

Value	Description
61271	System is running in connection-test mode - no processing
89114	Technical error occurred
89120	Actual length of tag exceeds maximum length
89121	Tag is not allowed for this message flow
89122	Tag is not allowed for this order type or field combination invalid
89123	Order not found in the FGW database
89125	Invalid combination of ExpireDate and TimeInForce
89135	ClOrdID already processed - PossResend not supported
89138	Tag contains an invalid value
89142	Tag is missing for this order type
89143	Tag is missing for this message flow
89144	No access for specified destination configured
89147	Invalid combination of the following tags:
89151	Could not process message
89152	Busy: Txn rejected. Try again
89153	Invalid Party Group
89154	Required tag missing
89159	Message Throttle Limit exceeded
89161	Invalid instrument group
89162	Order type invalid for multileg requests
89164	Tag is not allowed
89166	Invalid combination of MassActionScope and Instrument-Data
89171	Request status unknown - please check status in an alternative way
89172	Request after end of stream not allowed
89173	Request with PossDupFlag (43) = Y not processed
89174	Field ClOrdId not found
89175	CIOrdID is empty
89176	CIOrdID must consist only of printable characters
89177	CIOrdID is not unique
89178	ClOrdID exceeds maximum length
89179	No orders deleted (no hits)

T7 FIX Gateway Manual (FIX 4.4)	V10.0

6.14.4 Error Codes from T7 Backend

The tables below document the error codes set by the T7 Backend and forwarded by the FIX Gateway (i.e. with ReturnCodeSource (25024) = 'TRADING SYSTEM').

This table contains error codes that can be generated during the regular processing:

Value	Description	Deriv- atives	Cash
99	Other	✓	✓
102	Service temporarily not available	✓	✓
103	Service not available	✓	✓
210	Validation Error	✓	✓
211	User already logged in	✓	✓
223	User entitlement data timeout	\checkmark	✓
225	User login tries limit (per time interval) reached	\checkmark	✓
226	Limit of outstanding session/user logins reached (per Business Unit)	✓	✓
227	Limit of outstanding session/user logins reached (per Session)	\checkmark	✓
10000	Order not found	✓	✓
10001	Price not reasonable	✓	✓
10006	Stop buy price not reasonable	✓	✓
10007	Stop sell price not reasonable	✓	✓
10008	GFD order is not executable on current business day	✓	✓
10009	BOC order rejected in state other than cont.		✓
10011	Order maintenance not allowed in current state	✓	✓
10012	Order not accepted in Volatility Freeze		✓

T7 FIX Gateway	6 August 2021
T7 FIX Gateway Manual (FIX 4.4)	V10.0

This table contains specific error codes that will be delivered only in the message *User/QuoteRequestReject (UAG/AG)* for rejections to requests for private quotes (T7 Boerse Frankfurt):

Value	Description	Deriv- atives	Cash
2	Exchange (Security) Closed		✓
100	Requested size too small		✓
101	Requested size too big		✓
102	No valid quote from issuer		✓
103	Sold out		✓
104	Trading restriction		✓
105	RequestForQuote request timed out		✓

This list documents error codes that can only occur in exceptional situations (caused technical problems, e.g. communication issues between the FIX Gateway and the T7 Backend):

Value	Description	Deriv- atives	Cash
1	Required Tag Missing	✓	✓
5	Value is incorrect (out of range) for this tag	✓	✓
7	Decryption problem	✓	✓
11	Invalid TemplateID	✓	✓
16	Incorrect NumInGroup count for repeating group	✓	✓
100	Throttle limit exceeded	✓	✓
101	Stale request was not forwarded to T7	✓	✓
105	Error converting response or broadcast	✓	✓
200	Internal technical error	✓	✓
10002	Duplicate Order (ClOrdID)	✓	✓
10010	Create CI Throttle Exceeded	✓
