T7 Release 14.1	
XML Report Reference Manual	Vers. 1
	04.03.2026
Introduction	Page 40

1 Introduction

This document describes all the reports based on T7 trading data for both the Cash and Derivatives markets.

This document is intended for the staff dealing with reports. The purpose of the XML Report Reference Manual is

- . to explain the content of the reports, and
- . to describe each report in detail

Apart from the detailed description of the XML reports this document also contains additional information related to generic text reports.

In addition to the trading reports, this document also contains fees related reports for the Cash Markets. Eurex participants need to refer to the clearing documentation for fees and clearing related reports. For Eurex the clearing documentation is published on the Eurex Clearing webpage: www.eurexclearing.com

Please note that all reports are provided exclusively via the Common Report Engine.

2 XML Trading Reports Concepts

In this chapter the main concepts of the XML Reports offered by T7 are explained.

2.1 XML Report Layout

The XML report layout consists of the basic elements *structures*, *structure members*, and *data types*.

2.1.1 Structures

Structures are ordered collections of structure members and may contain fields and/or Sub structures as members, forming a structure tree. On the top level (the root of each structure tree) there is the main report structure.

Most structures are defined as a part of one report. Structures used in several reports are called *common structures*.

Naming conventions for structures are:

<i>reportName</i>	Main structure of a report
<i>reportName***Grp</i>	Sub structure of a report
<i>reportName***KeyGrp</i>	Sub structure of a report which contains key fields

2.1.2 Structure Members

A *structure member* is either a field or another (sub-)structure. A structure member may be enriched by attributes to define report specific properties.

Fields are defined by their data type and share the name of their data type. Sub structures may occur once or multiple times in a structure. The name of a Sub structure member is equal to the Sub structure name.

Each field and structure occurs at a specific place in the sequence of fields in the Sub structure tree of a report. Sub structure can represent an exception, in the sense that they can occur multiple times.

Structure members may be mandatory or optional. Optional members may be omitted in the XML report.

2.1.3 Data Types

Data types describe context-independent properties of a field, like its format and length. The format of a data type may be alphanumeric, numeric, or signed numeric.

These properties are independent of the report where a field of this data type occurs. Since a field in a structure must have the same name as its data type, this implies that two fields with the same name always have the same data type.

2.1.4 Rules for creating the XML Structure

2.1.4.1 Main Report Structure

The report XML structure is enclosed in the tag

T7 Release 14.1	
XML Report Reference Manual	Vers. 1
	04.03.2026
XML Trading Reports Concepts	Page 42

```

<rptName>
  <rptHeader>
    ...
  </rptHeader>
  <rptNameGrp>
    ...
  </rptNameGrp>
</rptName>

```

2.1.4.2 Sub structures

Sub structures are written to

```

<structureName>
  ...
</structureName>

```

The structure members occur in the sequence as they are defined in the XML report layout. Optional members may be omitted, if they contain no data.

In case of a multiple occurrence, the <structureName> element is repeated.

2.1.4.3 Field Values

Field values are written as

```
<fieldName>fieldValue</fieldName>
```

or, if no value is given for a mandatory field,

```
<fieldName/>
```

Optional fields are omitted if no value is given.

Alphanumeric field values are written to the XML report with their complete field length.

Examples:

```

<instNam>DBO</instNam>
<text>430-11172 </text>

```

Numeric values with precision 0 are written in the format DD...D without leading zeroes (D denotes a digit 0, 1, ..., 9).

Example:

```
<sumTrnLngQty>558</sumTrnLngQty>
```

Numeric values with precision > 0 are written in the format DD...D.D...D, where the number of trailing digits is given by the precision.

Example:

```
<valPerTick>1.0000</valPerTick>
```

Signed numeric values are prefixed with a plus ('+') or minus ('--') sign.

Example:

```
<sumPrmVmarAmnt>-88880.00</sumPrmVmarAmnt>
```

2.1.5 Rules for Text Reports

The text reports created from the XML reports serve to display the contained data in a human readable format. Only the XML reports are suitable for automatic processing.

Any form of automatic text report processing is strictly not advisable, e.g. by parsing data from the text report content.

The following sections describe some generic rules how the layout of the text reports is determined from the XML report structure.

2.1.5.1 Generic Text Report Structure

The creation of generic text reports uses the following rules:

- The global layout of a generic text report is determined by the XML report data structure
- Data rows are shown in the sequence defined in the XML report
- Fields are shown in the sequence defined in the model
- Column widths are determined by the maximum of heading length and data field length
- Column headings are written into one line
- Spacing between columns is always one
- Underlines (indicating the column width) are provided for the field width of the first row
- Lines are wrapped, if they would be longer than 132 characters.
- Starting position for wrapped lines is one character indented from second field on the first line

2.1.5.2 Field Values

The display of field values adheres to the following rules:

- The field value display is determined by the field specific format, independent of the report context (i.e., the same field has the same format in all reports)
- The field column heading is determined by the field, independent of the report context (i.e., the same field has the same column heading in all reports).
- Alphanumeric values are displayed left-aligned with the original value retrieved from the XML Report data
- Numeric values are displayed right-aligned according to their field specific display format.

T7 Release 14.1	
XML Report Reference Manual	Vers. 1
	04.03.2026
XML Trading Reports Concepts	Page 44

The specific rules for numeric values are

- The decimal separator is a point
- No leading zeroes are displayed
- Per Default “minus signs” are written as postfix of the number (e.g. 123.45-)
- It is possible to have a thousand separator for the text format (e.g. 12,345,678.9)
- The decimal digits given by the field precision varies depending on the format of the report (Please refer to section 5.1 for examples):
 - Old Report Format:
All decimal digits given by the field precision are displayed (e.g. **1.200** for precision 3)
 - New Report Format:
All decimal digits given by the field precision are displayed (e.g. **1.2** for precision 3) with the exception of zeroes. In case there are only zeroes as decimal places, the decimal places will not be explicitly stated.

2.2 Common Report Engine

The Common Report Engine is the exclusive source for report files for participants. It is an FTP based SFTP report server that allows participants to easily retrieve all of their reports from a single source.

All transactional and participant specific reports are available in a participant-specific directory structure. Non-transactional and non-participant specific reports and files are available in the public area. Such reports are tagged as **CRE Area: public** in this manual.

The Common Report Engine can be accessed via leased line connectivity or via the Internet.

2.3 Product and Instrument Reference Data

T7 provides the product and instrument reference data on the T7 Reference Data Interface (T7 RDI) and in form of XML files as T7 Reference Data Files (T7 RDF), both in FIXML layout.

The T7 RDF files are available on the Common Report Engine (CRE) in the Public Area.

T7 instrument specific information, such as ISIN, is present in Tag 455 <SecurityAltID> when Tag 456 <SecurityAltIDSource> has the value 4.

The Market and Reference Data Interfaces Manual available on the Eurex website, provides more details about the layout of the T7 RDI and T7 RDF messages.

3 Introduction to XML Reports

3.1 XML Report Characteristics

The XML report descriptions contain the following information:

Description

A textual description of the functional contents of the report.

Frequency

The frequency or the specific events at which the report is created.

Availability

The group of members (e.g. all members, clearing members) to which the report is available.

Availability for “all members” indicates that this report is available to all the members whose data is present in these reports or the report do not contain member specific header.

XML Report Structure

A description of the composition of groups and tags that are used with the XML report. Underlined items represent groups; the contained tags are identified by indent level. Additional information is provided on the cardinality of subgroups. Please refer to *section 3.2* for a description of cardinalities.

M/O

A usage code to indicate whether a report tag is mandatory or optional. Please refer to *section 3.3* for a detailed description.

Text Report Heading

The heading of each tag when printed in a text report. The heading depends on the tag, but may be defined different in a specific report context. Tags bound together in a group may be concatenated under one heading.

If the text report heading is marked “(XML only)”, the tag content is not written into the text report.

Text Report Structure

A generic description of the layout that is used with the text report. Each text report field is printed once with his heading and the generic text format which is used to display the value. Alphanumeric values are filled up with X, according to the field length. Numeric values are filled up with 9, together with thousand separators, decimal points and signs if applicable. Please remark that the layout of text reports may be subject to change without further notice.

3.2 Structure cardinality

Any sub structure may be contained zero, one or multiple times in a structure.

The XML report descriptions contains a cardinality information for each structure in the form

structure

or

structure, repeated *cardinality* times:

Cardinality	Description
<i>(none)</i>	Substructure occurs exactly one time
<i>m</i>	Substructure occurs exactly <i>m</i> times
<i>m ... n</i>	Substructure occurs minimal <i>m</i> , maximal <i>n</i> times
<i>m ... variable</i>	Substructure occurs <i>m</i> to any number times

Table 3.1 - Structure Cardinality Descriptors

3.3 Usage Code

The XML report descriptions contain usage codes for each tag. These codes provide information on whether a tag is mandatory or optional. *Table 3.2* below lists all applicable usage codes and provides a description.

Usage Code	Explicit	Field Usage Description
m	mandatory	Tag occurs always (but may contain an empty string)
o	optional	Tag may be omitted

Table 3.2 - Field Usage Codes

3.4 Reports per T7 Trading Instance

For members trading on various T7 instances, reports will be provided separately for each T7 instance.

The report ID and the report layout will be common. Reports can be distinguished by the corresponding T7 trading instance specific environment number in the report file name (e.g., “90” for T7 Production Standard, “60” for T7 Deutsch Börse Frankfurt Production).

4 XML Report Descriptions

The description of the XML Reports and Tags in this document is based on the configuration.

4.1 CB Clearing Position and Transactions

4.1.1 CB042 Fee Per Executed Order

Description This report lists each transaction per Order ID, the fee of each executed order and the order volume. It is summed by instrument and account type.

This report is sorted by trading currency, account type, instrument and fee type. For each instrument the totals are shown for actual payable fees. For each trading currency, converted into billing currency by the mentioned exchange rate, these totals are accumulated by instrument and account type of an exchange member. This report provides also a sum of order volume and number of orders.

This report is available for Clearing Members listing an accumulation of the information of their Non-Clearing Members.

This report is available only for cash markets.

Frequency Daily.

4.1.6 CB069 Transaction Report

Description	This report provides Participants with detailed information about their product specific transactions, traded volume and ordered volume. This report is grouped into three parts. The first part provides the information on the number of transactions, ordered volume and traded volume per product per limit type. The second part provides additional granularity of session ID level to the information from the first part. The third part provides additional granularity of trader ID level to the information from the first part. The column 'User' lists trader IDs. For the limit type 'Standard', the values of traded volume and ordered volume are not measured separately. "n/a" stands for not available. This report is available only for derivative markets.

4.2 PM Performance Measurement

4.2.1 PM010 Performance Report Equities Regulated Market Maker

Description	This report informs the Regulated Market Maker of his compliance with the minimum requirements in regard to the participation rate in continuous trading on the preceding trading day and on all trading days since the beginning of the respective month. It further includes the performance data of the participation during stressed market conditions and based on the results, if the Regulated Market Maker is entitled for reimbursement of transaction fees according to Xetra price list. This report lists transactions in terms of units, trades, and value - based on matched quotes as Regulated Market Maker and also lists the average time weighted spread and average quotation volume in units per instrument. This report only lists equities. The report PM020 Performance Report ETFs & ETPs Regulated Market Maker outlines performance data for ETFs & ETPs. The Designated Sponsor and Regulated Market Maker Guide available on the Cash Web site contains detailed information about Deutsche Boerse Performance Measuring and Rating of Designated Sponsors and Regulated Market Makers. This report is available only for cash markets. This report is available only in XML format.

4.2.7 PM500 Rating Report Equities Designated Sponsor

Description	This report includes all equities that are determined for the rating scheme. Foreign equities out of the quotation board, equities registered during a month and High Liquid equities not flagged for activation for this Designated Sponsor are excluded. For each instrument, a rating is calculated by applying the precondition that minimum requirements are fulfilled. In total, the consolidated rating across all equities is calculated, providing an indication to Designated Sponsor in regard to the quarterly rating. If the Designated Sponsor (agent) delegated its sponsoring activity to another participant (principal), the XML report will be addressed to the delegated Designated Sponsor (principal), not to the actual Designated Sponsor (agent). 4.2.12 PM810 Individual Issuer-Designated Sponsor Report ETFs & ETPs

Description	This report includes the daily and month-to-date performance of one Designated Sponsor for one Issuer in all ETFs & ETPs the Designated Sponsor supports out of the Issuer's ETF & ETP instruments. The performance data shows the participation rates during auctions and continuous trading based on the requirements that are defined by the Issuer as well as by Deutsche Boerse. Furthermore, the trading information is displayed such as trading volume executed by the Designated Sponsor, average spread and average quantity offered. This report is addressed to the Issuer and shows the same data as report PM820 Individual Designated Sponsor-Issuer Report ETFs & ETPs. If the Designated Sponsor (agent) delegated its sponsoring activity to another participant (principal), the XML report will be addressed to the delegated Designated Sponsor (principal), not to the actual Designated Sponsor (agent). The Designated Sponsor and Regulated Market Maker Guide available on the Cash Web site contains detailed information about Deutsche Boerse Performance Measuring and Rating of Designated Sponsors and Regulated Market Makers. This report is available only for cash markets. This report is available only in XML format.

4.5 TA Trading Maintenance

4.5.1 TA113 Complex and Flexible Instrument Definition

Description	This report lists for each product and each complex instrument type, the complex and the flexible instruments available at the beginning of the day or created during the day. Reports are split per Product, Instrument Type and Sub-Type (when it exists) and sorted per Instrument. For each complex instrument, the report lists the instrument mnemonic, the number of legs, and for each leg, the leg mnemonic and the corresponding side and ratio. For Option Volatility Strategies, the underlying leg (underlying product, side, ratio and mnemonic) and the underlying price are additionally listed. For Flexible Instruments, a distinction is done between flexible Futures and flexible Options for which the full instrument definition is provided. For TRF Strategies, the underlying leg (second leg product, side, ratio and mnemonic), the trade price of underlying leg and optionally Basis and Custom the underlying prices are additionally listed. This report is available only for derivative markets.

4.6.9 TC910 T7 Daily Match Step Activity

Description	This report lists for each product and each instrument all match steps created during the day and provides the corresponding trade volume reporting. Reports are grouped per Product, Instrument Type and Instrument ID and sorted per Match Step and Time. For each match step, the report gives the trade type, the trade price, the executed quantity and the number of traded buy and sell orders. It gives also for each match step the accumulated trade quantity per instrument since the start of day and the relative higher and lower trade prices at the trade time. This report is available only for cash markets.

4.7.9 TD959 End of Day Scope Delta Strike Window

Description	This report shows the daily requirement of the Basis Building Block, especially the breakdown per expiry/strike range for all Delta Strike Price windows in use. The purpose of the report is the reconciliation between the Eurex delta requirement and the member's internal systems. The report is public as it contains only the requirement, not the coverage perspective. For each expiry in scope, it shows strike range per time interval during the quotation period. This report is available only for derivative markets.

4.8.11 TE810 T7 Daily Trade Confirmation

Description	This report contains all T7 on-exchange and TES trades executed for a market participant during a trading day. Identified by their T7 deal item, trades are arranged by market participant, trader, product, simple instrument and clearing account. The trades are sorted by execution time. On and Off book Trade statistics (i.e. number of buy and sell on-exchange and TES trades and the corresponding accumulated quantities) are provided per instrument and account and per product at the end of the report. This report is based on trade information directly obtained from T7. For variance futures and total return futures it contains both trading and clearing notations. This report is available only for derivative markets.
Frequency	Daily.

4.8.13 TE910 T7 Daily Trade Activity

Description	This report lists for each product and each instrument all on-exchange match steps and TES trades created during the day and provides the corresponding on and off-book trade volume reporting. Trades are grouped per Product, Instrument Type and Instrument ID and sorted per Trade Time. For each trade, the report gives the trade type, the trade price, the executed quantity and the number of traded buy and sell orders. It gives also for each on-exchange match step the accumulated trade quantity per instrument since the start of day and the relative higher and lower trade prices at the trade time. This report is available only for derivative markets.

4.8.14 TE930 T7 Daily Trade Statistics

Description	This report provides the daily information for T7 trades executed on the simple instrument level, included flexible instruments. The daily prices and trade volumes are listed for all options and futures series and summarised on the product level. This report is similar to the report TD930, that is based on clearing positions. In contrast, the report TE930 is based on the deal information directly obtained from T7. For Variance Futures and Total Return Futures, the report TE930 is based only on trading notations. This report is available only for derivative markets.

4.11 TT Entitlement and Security

4.11.1 TT132 Market Maker Protection

Description	For each market participant and for each exchange, this report lists all market maker protection (MMP) activities during the day, i.e. the maintenance of the MMP limits, the inactivation and the reactivation of quotes. Reports are split per business unit and product and sorted by time and MMP activity. When the quote trading exceeds a defined MMP limit on the product, corresponding quotes status will depend on activationType. If it is "inactivate" then quotes will be inactivated. If it is "Inactivate_Delete" then quotes will be inactivated and existing quotes will be deleted. For each quote inactivation (manual or due to a MMP limit break) and for each manual reactivation, two records are generated with the same time: - one with the MMP limits and the quote inactivation status, - one with the corresponding MMP counters which are reset when quotes are reactivated. This report is available only for derivative markets.

5 Introduction to Report Tag Descriptions

This is a description of the tags of XML reports. An overview of the tag descriptions is given first.

5.1 Tag Characteristics

The characteristics of each tag are detailed giving the following information.

Description	A short description of the tag's functional meaning.
Format	Defines the format and size of the tag. <i>Table 5.1</i> describes common formats for tags. Deutsche Börse is migrating its data platform for the provision of XML reports to a new technology stack. With this migration Deutsche Börse is enhancing its data platform in terms of performance and scalability to ensure report delivery in time. Increased transaction volumes are one of the key drivers for this migration. In the course of this migration, an adaption to the content display of numeric and numeric signed fields with decimals will take place: In case there are only zeros as decimal places, the decimal places will not be explicitly stated.

Format	Description	Example
alphanumeric <i>n</i>	Text of maximal length <i>n</i> , stored as string.	An tag with format “alphanumeric 6” may contain the values “TRD001” or “ABC” or “.”.
numeric <i>n</i> [<i>, m</i>]	Old Format Description: Number with <i>n</i> significant digits and, if given, precision <i>m</i> . The number is stored as a string containing the decimal point if applicable	A tag with format “numeric 5, 2” might contain the values “314.15” or “3.14” or “0.00”.
	New Format Description: Number with <i>n</i> significant digits and, if given, precision <i>m</i> in case of <i>m</i> not being zeros. The number is stored as a string containing the decimal point if applicable.	A tag with format “numeric 5, 2” might contain the values “314.15”, “3.14”, “3”, or “0”.
numeric signed <i>n</i> [<i>, m</i>]	Old Format Description: Signed number with <i>n</i> significant digits and, if given, precision <i>m</i> . The number is stored as a string prefixed with the “+” or “-” sign and containing the decimal point if applicable.	A tag with format “numeric signed 5, 2” may contain the values “+314.15” or “+3.14” or “-314.15” or “+0.00”.
	New Format Description: Signed number with <i>n</i> significant digits and, if given, precision <i>m</i> in case of <i>m</i> not being zeros. The number is stored as a string prefixed with the “+” or “-” sign and containing the decimal point if applicable.	A tag with format “numeric signed 5, 2” may contain the values “+314.15” or “+3.14” or “-314” or “+0”
DateFormat	Date, stored as a string in the format CCYY-MM-DD	A DateFormat tag may contain the value “2005-03-28”.
TimeFormat	Time, stored as a string in the format hh:mm:ss.cc, reported in the corresponding market place time zone.	A TimeFormat tag may contain the value “23:59:59.99”
TimeFormat18	Time, stored as a string in the format hh:mm:ss.aaaaaaaa, reported in the corresponding market place time zone.	A TimeFormat tag may contain the value “23:59:59.999999999”
